INFLUENZA SURVEILLANCE REPORT: HEALTH SERVICE REGION 2/3

Week 45 (November 8 - 14, 2015)

INFLUENZA ACTIVITY LEVEL, HSR 2/3

* See page 6 for activity level determination

Minimal
Sporadic
Local
Regional
Widespread

WEEKLY OVERVIEW

Health Service Region 2/3

- **1.9% of patients presented with influenza-like illness (ILI), which is below the HHS Region 6 baseline of 3.6%.**
- **The overall school absenteeism rate was 4.2%, of which 2.3% was attributable to ILI.**
- **3.1% of tests performed were positive for influenza.**
- **No influenza-associated pediatric deaths were reported this week. None have been reported this season.**
- **No influenza outbreaks were reported this week.**

Texas

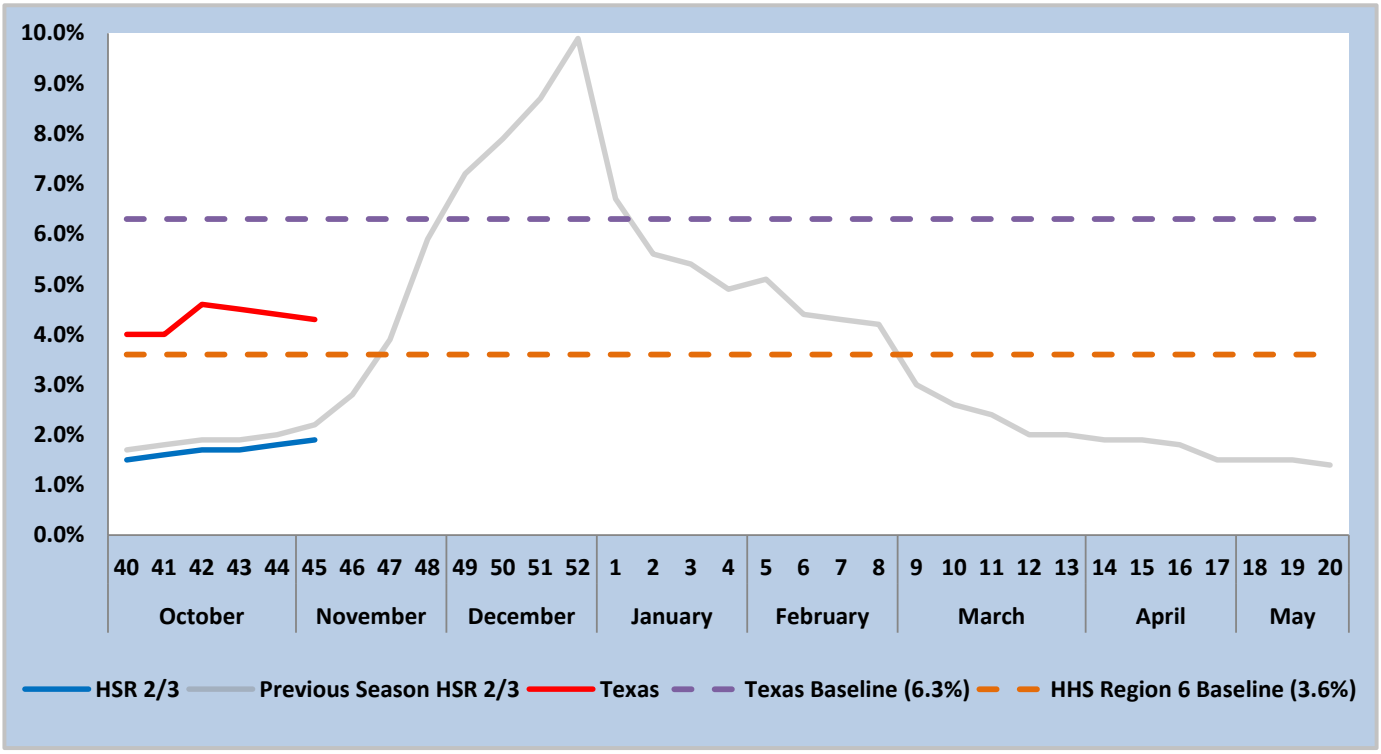
- **4.3% of patients presented with ILI, which is below the statewide baseline of 6.3%.**
- **19 out of 1,214 specimens (1.6%) reported to the state were positive for influenza.**
- **No influenza-associated outbreaks were reported this week.**
- **No influenza-associated pediatric deaths were reported this week. None have been reported this season.**

United States

- **Influenza activity remained low. 1.6% of patients presented with ILI, which is below the baseline of 2.1%.**
- **5.7% of deaths were due to pneumonia and influenza, which is below the epidemic threshold of 6.6%.**
- **194 out of 11,899 (1.6%) tests reported to WHO and NREVSS laboratories were positive for influenza.**
- **Influenza B represented 42.8% of positive influenza tests reported.**
- **1 influenza-associated pediatric death was reported this week. 1 has been reported this season.**

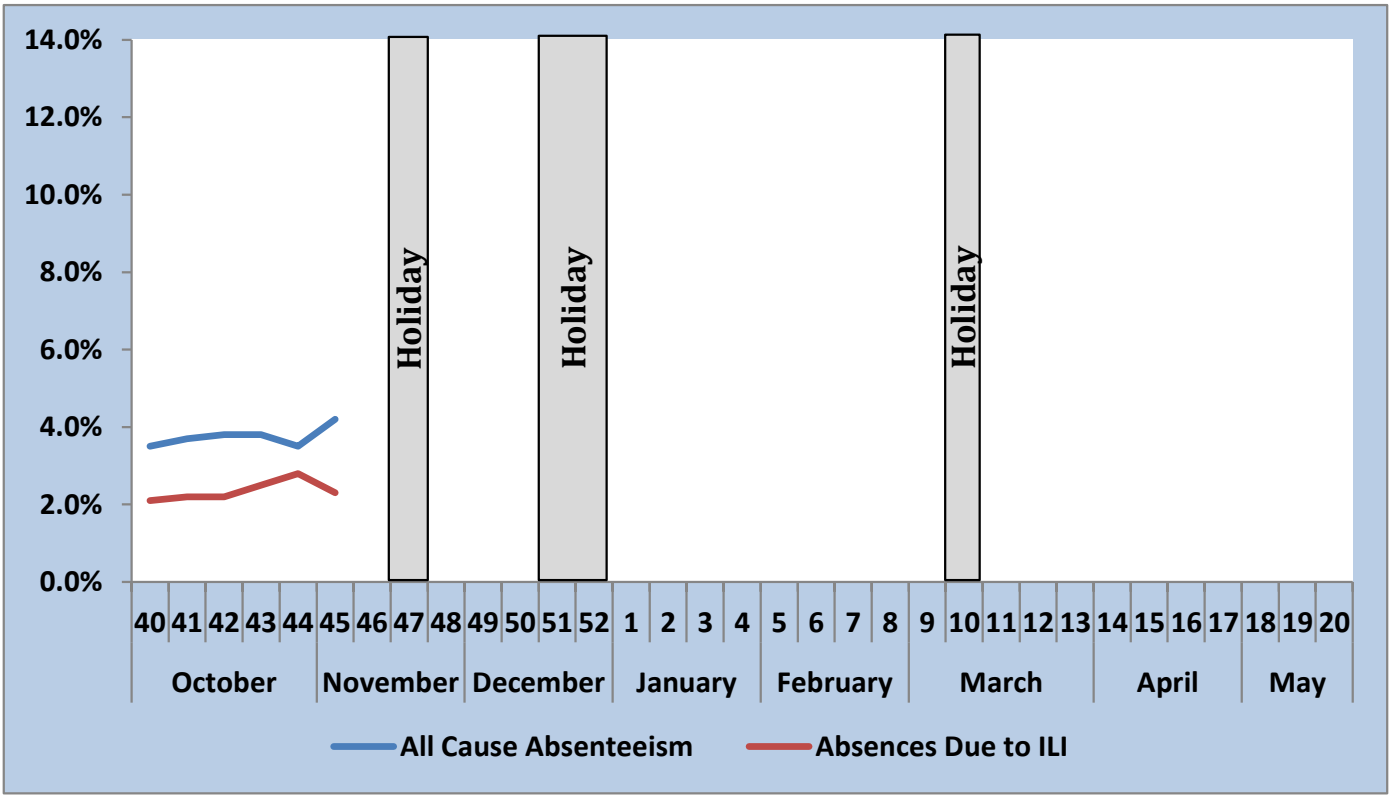
NOTE: Variability in expected influenza activity between regions exists and therefore different baselines are established at the national, state, regional, and local levels. DSHS HSR 2/3 has not established a baseline and will utilize the HHS Region 6 baseline as an approximation.

GRAPH I. INFLUENZA-LIKE ILLNESS, PERCENTAGE OF TOTAL PROVIDER VISITS



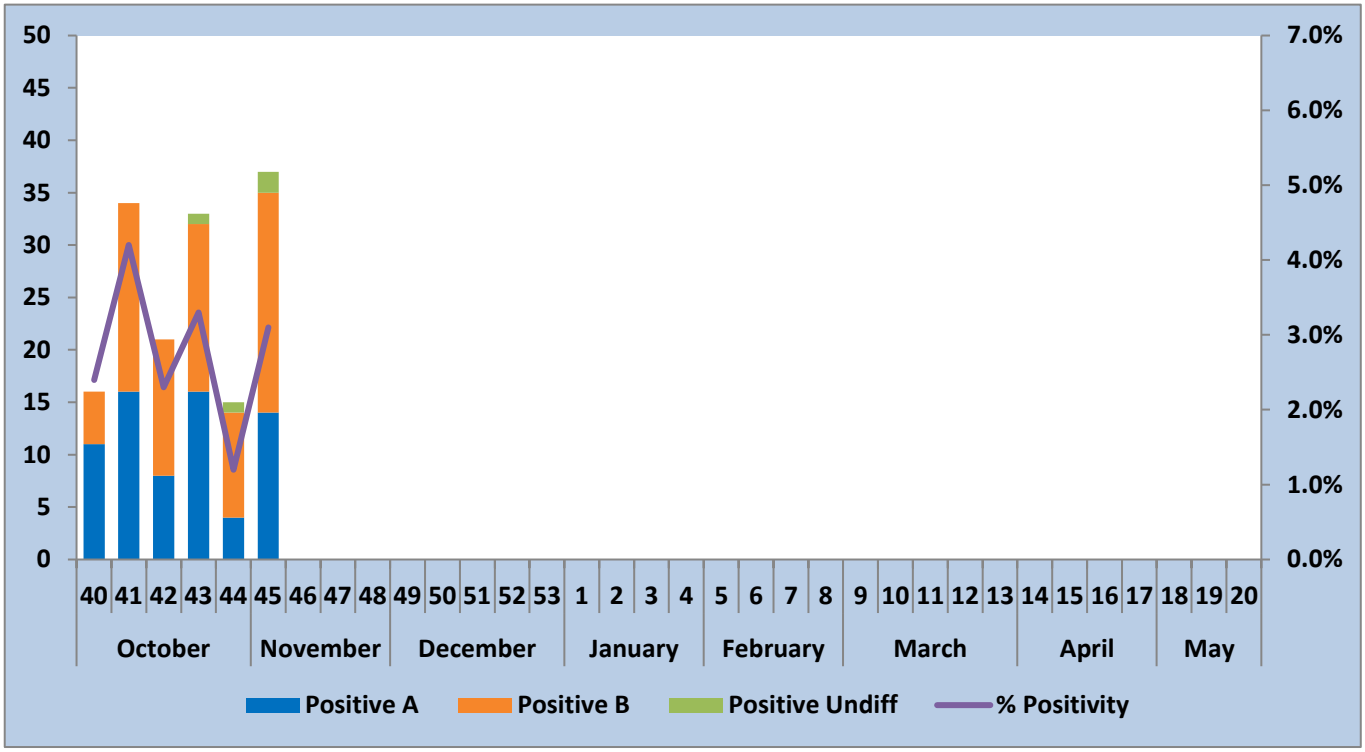
During week 45, 27 healthcare facilities and 7 health departments reported data to DSHS HSR 2/3 which included a total of 63,969 patients and 1,222 patients with ILI.

GRAPH II. PERCENTAGE DAILY ABSENTEEISM DUE TO ILI



Absences due to ILI accounted for 2.3% of all reported school absences this week.

GRAPH III. INFLUENZA TEST RESULTS, TYPE AND OVERALL POSITIVITY



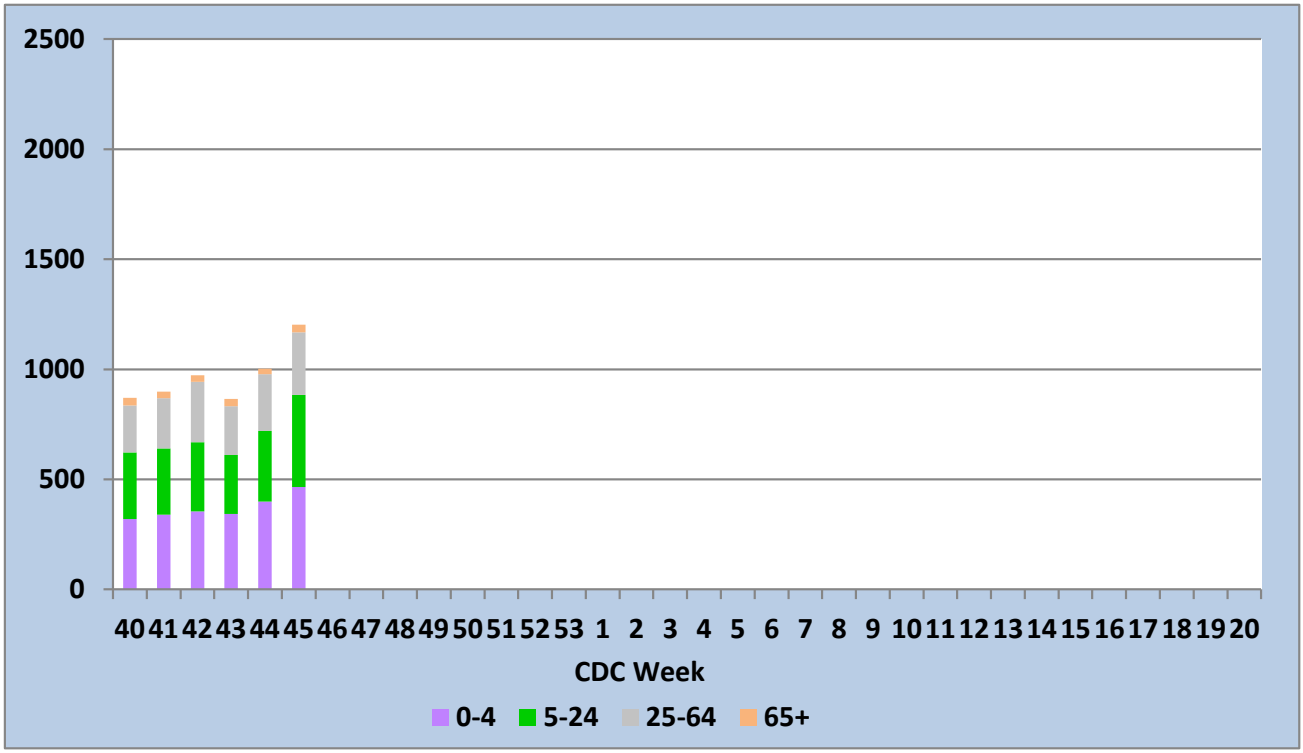
During week 45, influenza was detected in 37 of 1,200 specimens tested. None were confirmed by PCR or culture.

TABLE I. INFLUENZA TEST RESULTS, NUMBER AND PERCENT BY TESTING METHOD

	Season to Date	Week 45	Week 44
Total Tests Performed	5,788	1,200	1,210
Total Positive	156 (2.7%)	37 (3.1%)	15 (1.2%)
Rapid Type A	67 (42.9%)	13 (35.1%)	4 (26.7%)
Rapid Type B	81 (51.9%)	21 (56.8%)	10 (66.7%)
Rapid Undifferentiated	4 (2.6%)	2 (5.4%)	1 (6.7%)
Confirmed Type A	2 (1.3%)	1 (2.7%)	0 (0%)
A H1N1 (2009)	0 (0%)	0 (0%)	0 (0%)
A H3N2	2 (100%)	0 (0%)	0 (0%)
Not Subtyped	0 (0%)	0 (0%)	0 (0%)
Confirmed Type B	2 (1.3%)	0 (0%)	0 (0%)

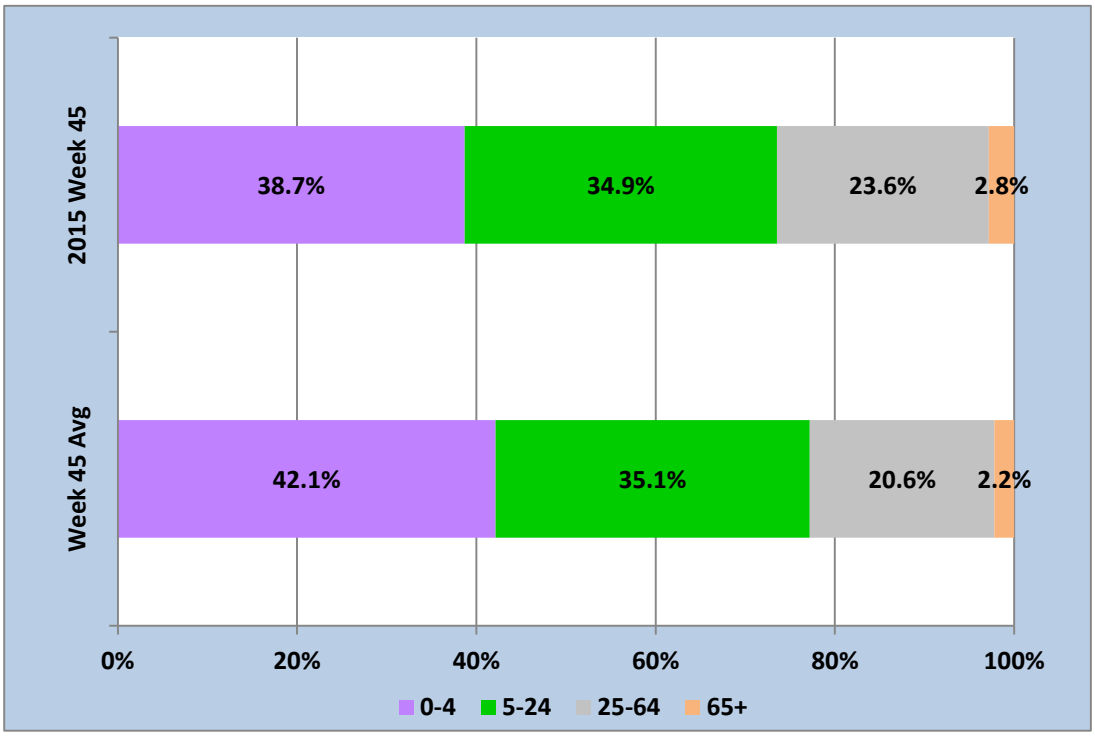
The percentage of influenza A H1N1 (2009), A H3N2, and type A not subtyped are calculated as a percentage of all reported tests confirmed positive for influenza type A. Confirmed represents a positive PCR or culture.

GRAPH IV. INFLUENZA-LIKE ILLNESS HOSPITAL VISITS BY AGE GROUP



Data captured from ESSENCE syndromic disease surveillance system representing the percentage of emergency room visits that were due to ILI for each age group. During week 45, there were 1,202 emergency room visits due to ILI in ESSENCE participating facilities.

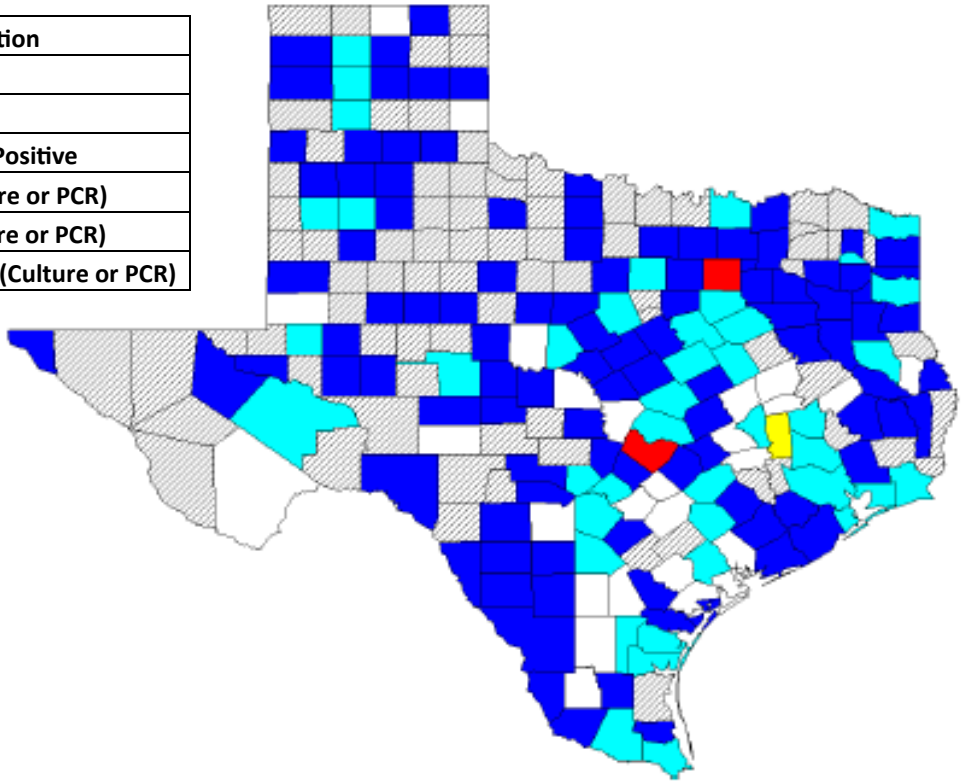
GRAPH V. AGE COMPOSITION OF INFLUENZA-LIKE ILLNESS HOSPITAL VISITS



The week 45 average is an average of ESSENCE reported ILI visits during week 45 in the previous 5 influenza seasons.

MAP I. INFLUENZA ACTIVITY, TEXAS WEEK 45

	No Information
	No Activity
	ILI Only
	Rapid Test Positive
	Flu A (Culture or PCR)
	Flu B (Culture or PCR)
	Flu A and B (Culture or PCR)



MAP II. INFLUENZA-LIKE ILLNESS COUNTS (ESSENCE), HSR 2/3 COUNTIES

	1-5		6-11		12-24		25-63		64-471

Data gathered from facilities submitting syndromic surveillance information to ESSENCE.

The Texas Department of State Health Services, Health Service Region 2/3 Influenza Surveillance report is distributed Friday of each week.

***HSR 2/3 ACTIVITY LEVEL DETERMINATION**

Minimal

No laboratory confirmed flu A or B detected in region 2 OR 3 **AND** little or no ILI activity in region 2 OR 3 **AND** no outbreaks of lab confirmed /QT flu in region 2 AND 3.

Sporadic

Influenza rapid A or B detected in region 2 OR 3 **OR** Laboratory confirmed A or B detected in region 2 OR 3 **AND** low ILI activity in region 2 AND 3 **AND** no outbreaks of lab confirmed /QT flu in region 2 OR 3.

Local

Laboratory confirmed flu A or B detected in region 2 OR 3 in current or previous two weeks **AND** moderate ILI activity in region with confirmed flu A or B in current week or previous two weeks **OR** one or more outbreaks of lab confirmed /QT flu in region with confirmed flu A or B in current week or previous two weeks.

Regional

Laboratory confirmed flu A or B detected in 2 or more counties in region 2 OR 3 in current or previous two weeks **AND** elevated ILI activity in region with confirmed flu A or B in current week or previous two weeks **OR** two or more outbreaks of lab confirmed /QT flu in region with confirmed flu A or B in current week or previous two weeks.

Widespread

Laboratory confirmed flu A or B detected in 2 or more counties in region 2 OR 3 in current week **AND** significant ILI activity in region 2 AND 3 in current week **OR** two or more outbreaks of lab confirmed /QT flu in region 2 AND 3 with confirmed flu A or B in current week or previous two weeks.
