

Program Benefits

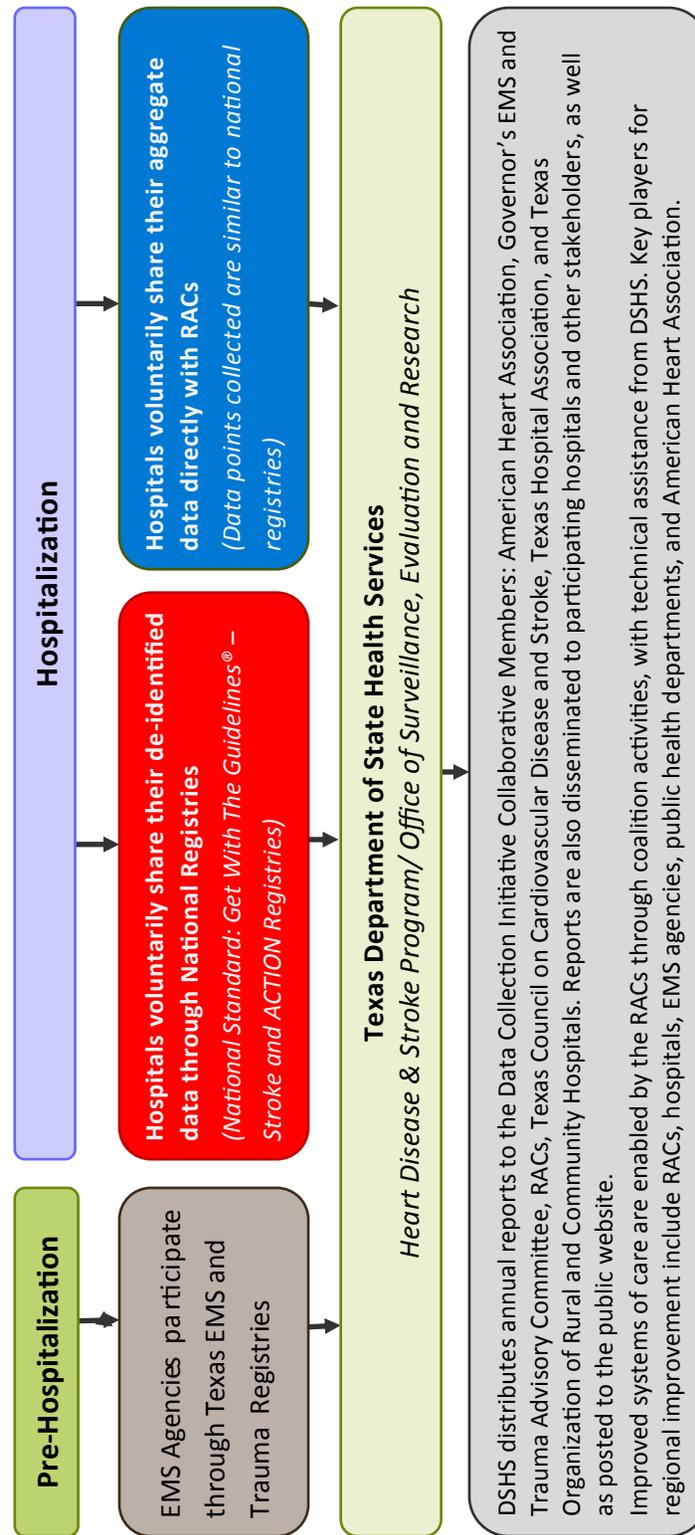

Hospitals that participate in the Data Collection Initiative will receive the following:

- A key role in the assessment of heart attack and stroke care in Texas.
- An opportunity to attend the annual quality improvement conference hosted by DSHS' Heart Disease and Stroke Program.
- A copy of DSHS reports addressing the current state of systems of care for stroke and heart attack across the *state*.
- A copy of DSHS reports addressing the current state of systems of care for stroke and heart attack at the *regional* level.
- Applicable only to hospitals participating through ACTION Registry-GWTG and enrolled in the Mission: Lifeline System/Regional Report: A copy of the *Mission: Lifeline Texas Report* that will allow a comparison of your hospital to the rest of the participants in the state.

In addition, DSHS plans to recognize EMS agencies, hospitals, and RACs for their innovative systems of care improvement strategies.

Our hospital participates because the Initiative supports our Chest Pain and Stroke Accreditation efforts and will help improve care for our patients.

Anita Gottlieb, System Director of Quality, CHI St. Luke's Health Memorial

DSHS distributes annual reports to the Data Collection Initiative Collaborative Members: American Heart Association, Governor's EMS and Trauma Advisory Committee, RACs, Texas Council on Cardiovascular Disease and Stroke, Texas Hospital Association, and Texas Organization of Rural and Community Hospitals. Reports are also disseminated to participating hospitals and other stakeholders, as well as posted to the public website.

Improved systems of care are enabled by the RACs through coalition activities, with technical assistance from DSHS. Key players for regional improvement include RACs, hospitals, EMS agencies, public health departments, and American Heart Association.

Texas Heart Attack and Stroke Data Collection Initiative

HOSPITAL PARTICIPATION

Project Overview

Background and Purpose

During the 83rd and 84th Regular Texas Legislative Sessions (Riders 97 and 67, respectively), lawmakers appropriated funds to the Texas Department of State Health Services (DSHS) to improve the collection of heart attack and stroke data throughout Texas. Prior to the DSHS-managed Texas Heart Attack and Stroke Data Collection Initiative, DSHS did not have access to statewide heart attack or stroke hospital data.

The collection of comprehensive hospital, and pre-hospital, data through the Data Collection Initiative will enable DSHS to:

- **Conduct gap analyses;**
- **Identify areas for improvement; and, ultimately,**
- **Improve care and outcomes for patients**

Hospitals do not submit their data directly to DSHS.

Hospitals may choose to participate with DSHS through enrollment in national registries and/or through data submitted to the Regional Advisory Councils (RAC).

National Registries:

- Acute Coronary Treatment and Intervention Outcomes Network (ACTION) Registry—Get With The Guidelines® (GWTG)
- Get With The Guidelines® (GWTG) - Stroke Registry

Hospitals enrolled in **national registries** are able to input patient data and monitor performance and quality measures directly for their hospital, independent of participation in the DSHS Data Collection Initiative.

RACs:

- STEMI Data Collection Tool
- Stroke Data Collection Tool

DSHS designed the **RAC data collection tools** to collect data similar to the core measures collected through ACTION Registry-GWTG and GWTG-Stroke. These tools, however, do not provide a mechanism for hospitals to input patient data or monitor their own performance and quality measures. Hospitals should follow up with their RAC to see what improvement capabilities may be available for their region. RACs aggregate hospital data for their region *before* submitting it to DSHS.

DSHS encourages hospitals to participate in both the heart attack and stroke components when feasible. Hospitals may participate through any combination of the four tools listed above.

The flowchart on the back of this brochure further illustrates how DSHS, in managing this initiative, receives de-identified pre-hospital and hospital data, and how the data collected is then used to improve the systems of care.

Data Collection & Sharing

All data accessed by DSHS is protected under HIPAA privacy and security laws and is not shared with external entities or organizations.

DSHS reports only provide aggregate numbers and will not identify individual hospitals or patients.

The most recent DSHS reports can be downloaded from the project website (link below). The Mission: Lifeline Texas Report is blinded.

Gap analysis findings are presented at the Governor's EMS and Trauma Advisory Council and Texas Council on Cardiovascular Disease and Stroke quarterly meetings, which are open to the public, as well as shared with all stakeholders and made available online.

DSHS obtains the data that is being entered in the national databases directly from the vendors who manage these databases. DSHS will not retrieve a hospital's data unless the hospital agrees to participate in the initiative and submits the forms included in the packet. DSHS obtains the data that is submitted to the RACs directly from each RAC after they have combined all data for their region.
