

RRS OBSERVATION and SIGN-OFF

Risk Reduction Specialist _____

Observers:

1. _____
2. _____
3. _____
4. _____

**Observers:*

Please date and Initial in the appropriate box below when the RRS has observed and has been observed

Pre-training Initial Session Observation	Pre-training Negative Follow-Up Session Observation	Pre-training Positive Follow-Up Session Observation	Post-training Initial Session Observation	Post-training Negative Follow-Up Session Observation	Post-training Positive Follow-Up Session Observation
		NA			NA
		NA			NA
		NA			NA

Observation Requirements:

Ideally, before attending PBC training, observe:

- 4 Initial (Pre-testing) Sessions
- 4 Negative Follow-Up (Results) Sessions
- 1 Positive Follow-Up (Results) Session

After PBC training, complete above observations (if needed); conduct sessions and be observed:

- 4 Initial (Pre-testing) Sessions
- 4 Negative Follow-Up (Results) Sessions
- 1 Positive Follow-Up (Results) Session

**For agencies conducting Rapid HIV testing, one session (with negative results) will count towards an initial and a follow-up negative session.*

After you have completed the PBC training, and once you have completed a cycle of observations, you may solo doing that type of session. (For example, if you have been observed by your supervisor conducting 4 initial sessions, you may conduct initial sessions on your own.)

If you have not completed a set of observations (for a particular type of session), you cannot do that type of session solo. (For example, you have completed the set of observations for the initial session, but still need to be observed 2 more times giving negative results. You can do initial sessions solo, but cannot give results solo until you have been observed two more times.)

Completion of the observation cycle is always at the discretion of your supervisor.
