

*Was the patient transported to a hospital by EMS?*

## Submersion Records

The screenshot shows a software interface titled "Pre-Hospital Information". It contains several input fields: "EMS Name", "EMS Name (Null Values)", and "EMS Number". A red box highlights the question "\*Was the patient transported to a hospital by EMS?" in the top left. A red arrow points from this box to a larger, zoomed-in view of the same question and dropdown menu below.

- This field should be answered with “yes” or “no”
- Please note that a response of “no” will not hide EMS fields below, such as EMS Name and EMS Number
- The EMS/Trauma Registry is working with our software vendor to determine if the functionality to hide EMS fields that are not appropriate based on a response to this field can be introduced

*Was the patient transported to a hospital by EMS?*

## Hospital Records

The image shows a software interface for 'Pre-Hospital Information'. At the top, there is a blue header bar with the text 'Pre-Hospital Information'. Below this, there is a red-bordered box containing three fields: 'EMS Name' (with a search icon and a trash icon), 'EMS Name (Null Values)' (with a dropdown arrow), and 'EMS Number' (with a search icon and a trash icon). A red arrow points from the 'EMS Name' field in this top bar to a larger, red-bordered box below it. This larger box contains two fields: 'EMS Name' (with a search icon and a trash icon) and 'EMS Number' (with a search icon and a trash icon).

- The Pre-Hospital Information section begins with EMS Name and EMS Number
- “Was the patient transported to a hospital by EMS?” does not appear
- The EMS/Trauma Registry is working with our software vendor to determine if the functionality to hide EMS fields that are not appropriate based on a response to these fields can be introduced
