INFLUENZA SURVEILLANCE REPORT: HEALTH SERVICE REGION 2/3

Week 11 (March 13 - 19, 2016)

INFLUENZA ACTIVITY LEVEL, HSR 2/3

* See page 6 for activity level determination

Minimal
Sporadic
Local
Regional
Widespread

WEEKLY OVERVIEW

Health Service Region 2/3

- 2.7% of patients presented with influenza-like illness (ILI), which is below the HHS Region 6 baseline of 3.6%.
- School absenteeism data is unavailable this week due to spring break.
- 18.5% of tests performed were positive for influenza.
- No influenza-associated pediatric deaths were reported this week. None have been reported this season.

Texas

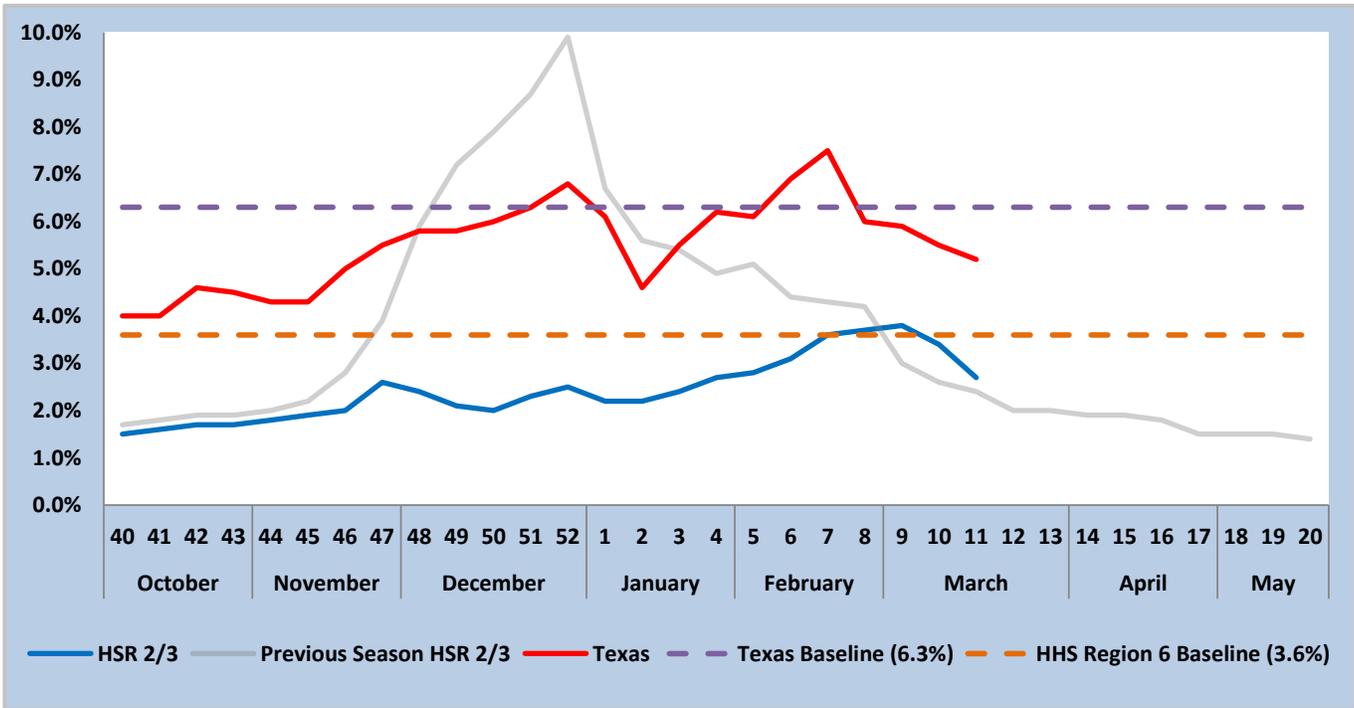

- 5.2% of patients presented with ILI, which is below the statewide baseline of 6.3%.
- 552 out of 2,671 specimens (20.7%) reported to the state were positive for influenza.
- No influenza-associated outbreaks were reported this week.
- 1 influenza-associated pediatric death was reported this week. 1 has been reported this season.

United States

- Influenza activity decreased. 3.2% of patients presented with ILI, which is above the baseline of 2.1%.
- 7.3% of deaths were due to pneumonia and influenza, which is above the epidemic threshold of 7.2%.
- 4,816 out of 23,946 (20.1%) tests reported to WHO and NREVSS laboratories were positive for influenza.
- Influenza B represented 26.1% of positive influenza tests reported.
- 2 influenza-associated pediatric deaths were reported this week. 30 have been reported this season.

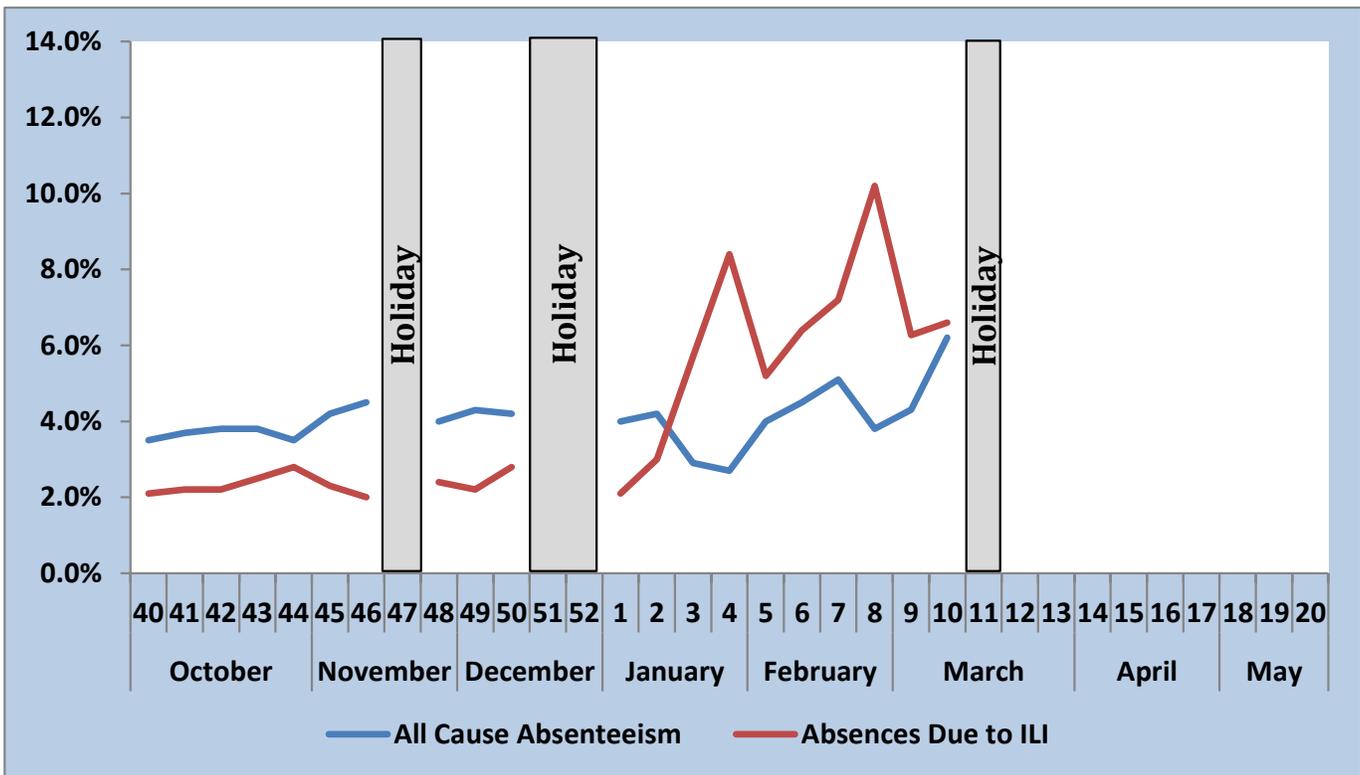

NOTE: Variability in expected influenza activity between regions exists and therefore different baselines are established at the national, state, regional, and local levels. DSHS HSR 2/3 has not established a baseline and will utilize the HHS Region 6 baseline as an approximation.

GRAPH I. INFLUENZA-LIKE ILLNESS, PERCENTAGE OF TOTAL PROVIDER VISITS

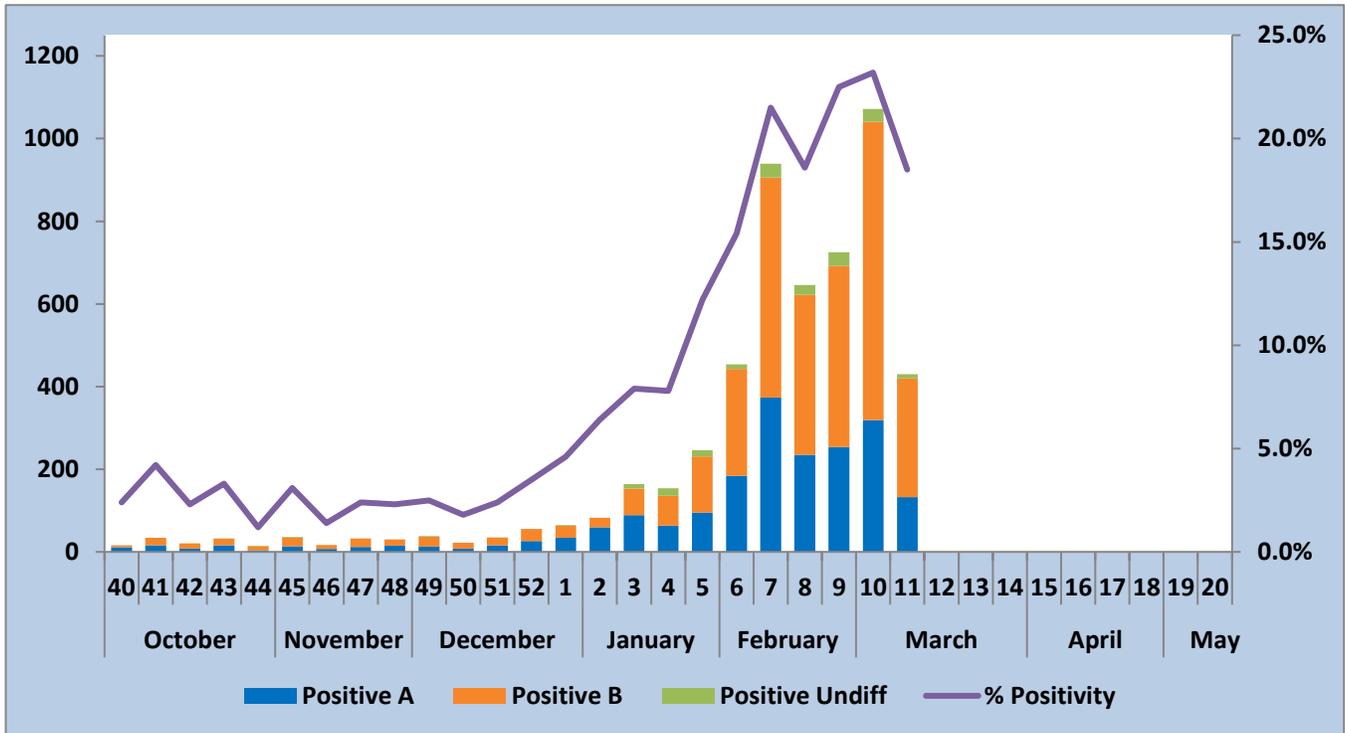

During week 11, 27 healthcare facilities and 7 health departments reported data to DSHS HSR 2/3 which included a total of 70,719 patients and 1,930 patients with ILI.

GRAPH II. PERCENTAGE DAILY ABSENTEEISM DUE TO ILI

School absenteeism data is unavailable this week due to spring break.

GRAPH III. INFLUENZA TEST RESULTS, TYPE AND OVERALL POSITIVITY

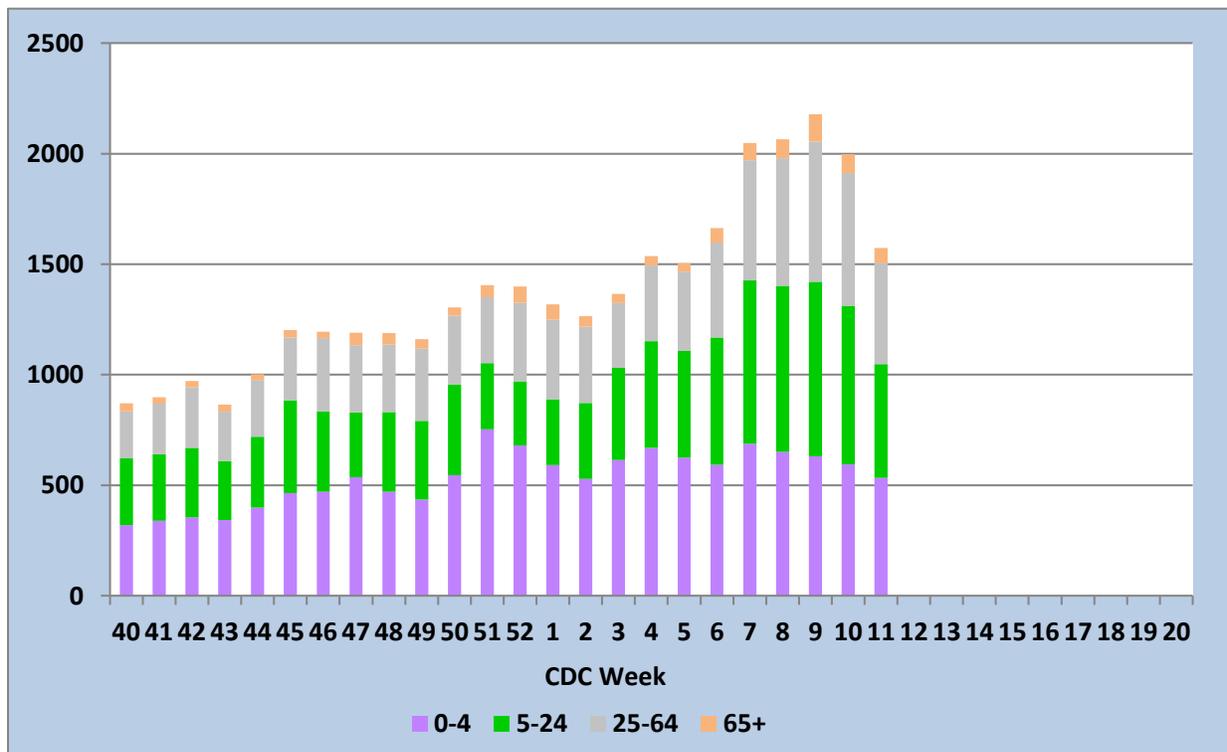

During week 11, influenza was detected in 430 of 2,319 (18.5%) specimens tested. Of those that tested positive, 14 were confirmed by PCR or culture.

TABLE I. INFLUENZA TEST RESULTS, NUMBER AND PERCENT BY TESTING METHOD

	Season to Date	Week 11	Week 10
Total Tests Performed	45,135	2,319	4,625
Total Positive	5,357 (11.9%)	430 (18.5%)	1,072 (23.2%)
Rapid Type A	1,886(35.2%)	123 (28.6%)	304 (28.4%)
Rapid Type B	3,057 (57.1%)	283 (65.8%)	700 (65.3%)
Rapid Undifferentiated	192 (3.6%)	10 (2.3%)	31 (2.9%)
Confirmed Type A	121 (2.3%)	10 (2.3%)	15 (1.4%)
A H1N1 (2009)	84 (69.4%)	9 (90%)	11 (73.3%)
A H3N2	21 (17.4%)	0 (0%)	0 (0%)
Not Subtyped	16 (13.2%)	1 (10%)	4 (26.7%)
Confirmed Type B	109 (2%)	4 (0.9%)	22 (2.1%)

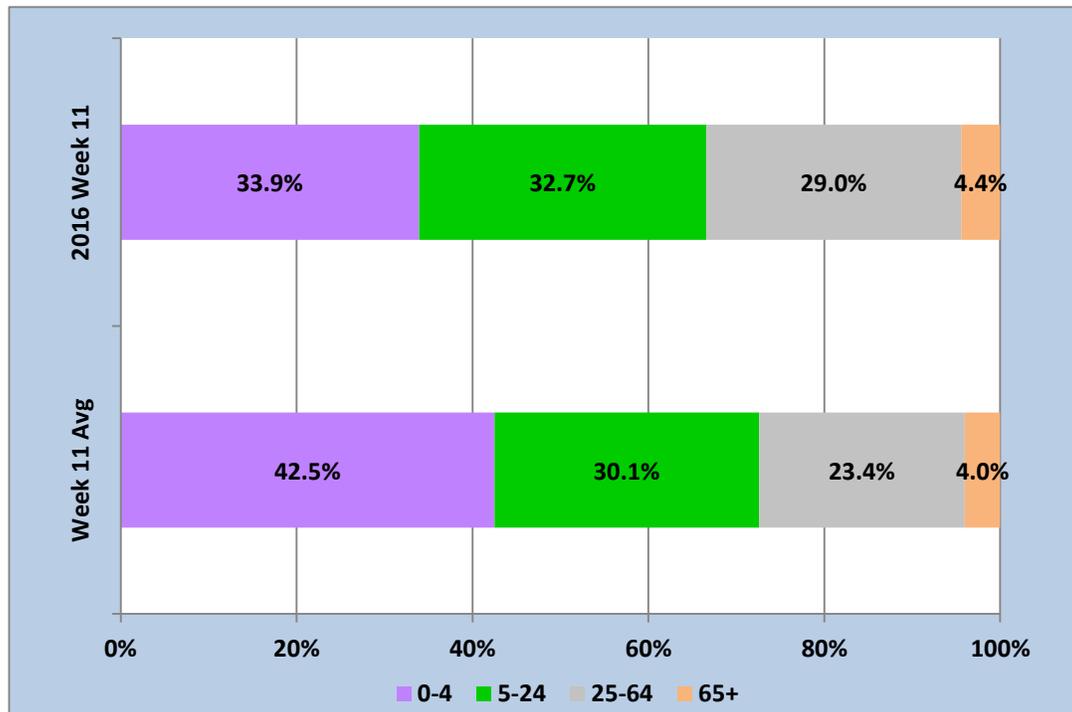

The percentage of influenza A H1N1 (2009), A H3N2, and type A not subtyped are calculated as a percentage of all reported tests confirmed positive for influenza type A. Confirmed represents a positive PCR or culture.

GRAPH IV. INFLUENZA-LIKE ILLNESS HOSPITAL VISITS BY AGE GROUP

Data captured from ESSENCE syndromic disease surveillance system representing the percentage of emergency room visits that were due to ILI for each age group. During week 11, there were 1,574 emergency room visits due to ILI in ESSENCE participating facilities.

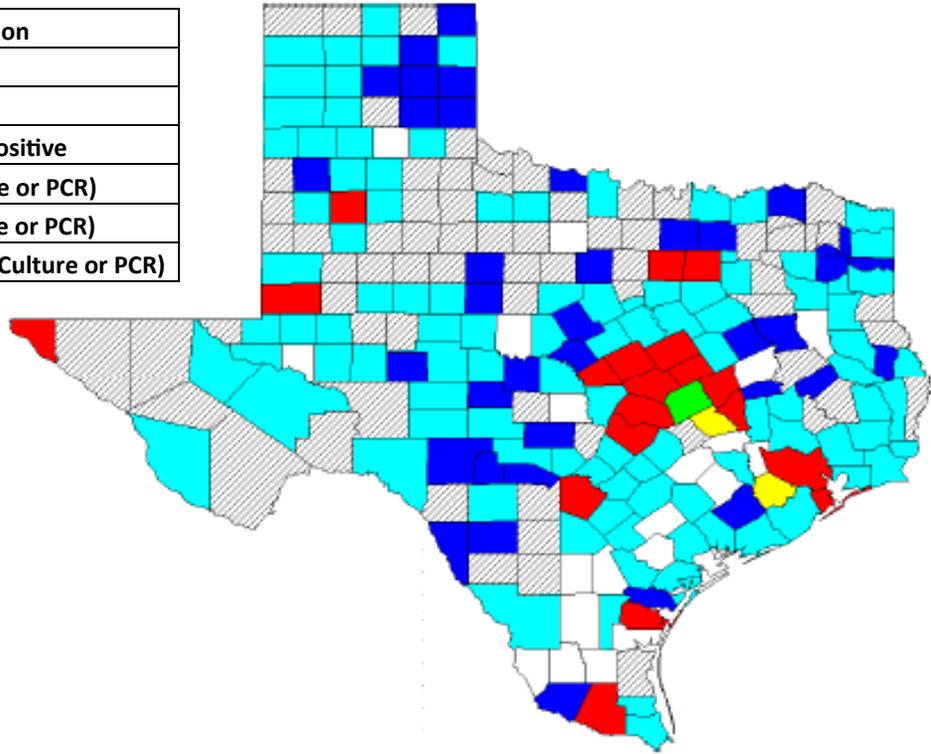

GRAPH V. AGE COMPOSITION OF INFLUENZA-LIKE ILLNESS HOSPITAL VISITS

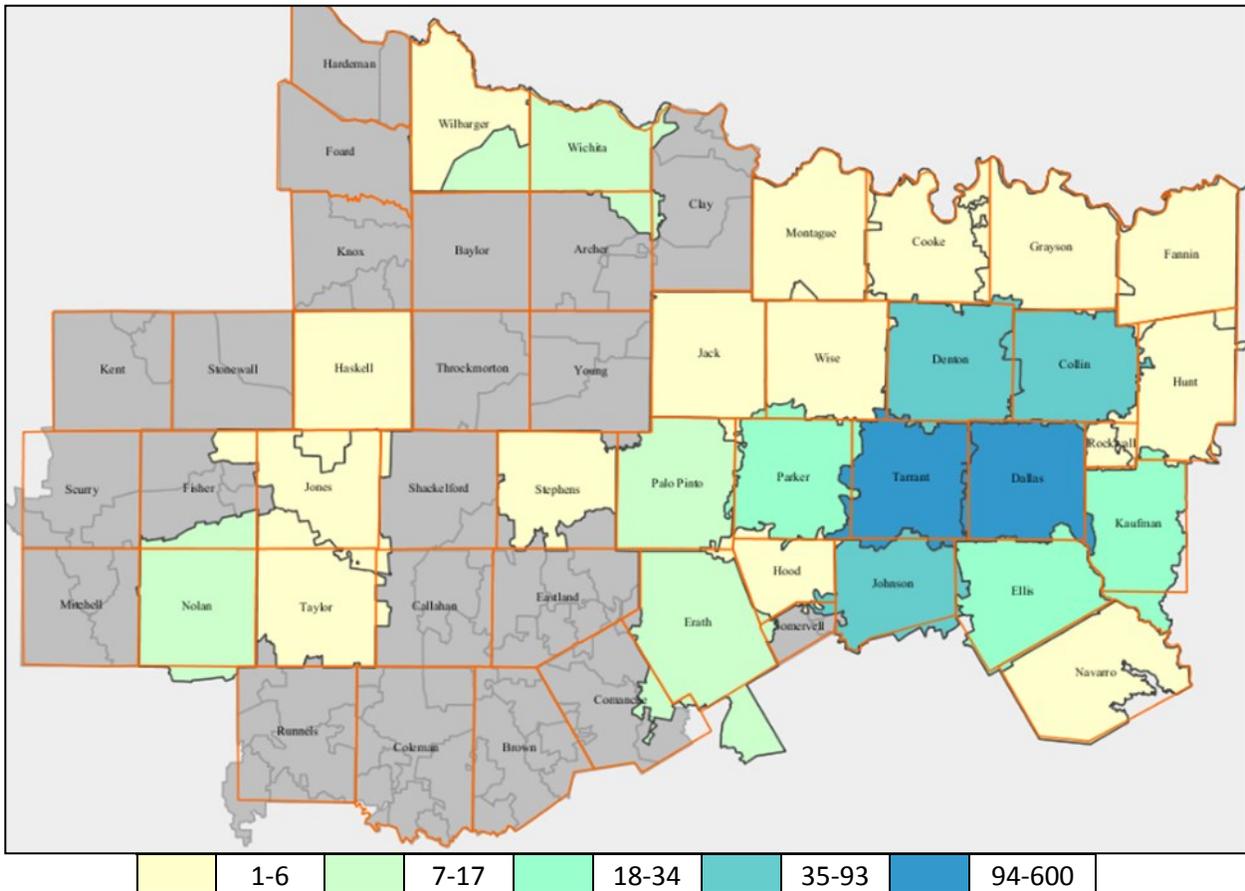

The week 11 average is an average of ESSENCE reported ILI visits during week 11 in the previous 5 influenza seasons.

MAP I. INFLUENZA ACTIVITY, TEXAS WEEK 11

	No Information
	No Activity
	ILI Only
	Rapid Test Positive
	Flu A (Culture or PCR)
	Flu B (Culture or PCR)
	Flu A and B (Culture or PCR)

MAP II. INFLUENZA-LIKE ILLNESS COUNTS (ESSENCE), HSR 2/3 COUNTIES

Data gathered from facilities submitting syndromic surveillance information to ESSENCE.

The Texas Department of State Health Services, Health Service Region 2/3 Influenza Surveillance report is distributed Friday of each week.

***HSR 2/3 ACTIVITY LEVEL DETERMINATION**

Minimal

No laboratory confirmed flu A or B detected in region 2 OR 3 **AND** little or no ILI activity in region 2 OR 3 **AND** no outbreaks of lab confirmed /QT flu in region 2 AND 3.

Sporadic

Influenza rapid A or B detected in region 2 OR 3 **OR** Laboratory confirmed A or B detected in region 2 OR 3 **AND** low ILI activity in region 2 AND 3 **AND** no outbreaks of lab confirmed /QT flu in region 2 OR 3.

Local

Laboratory confirmed flu A or B detected in region 2 OR 3 in current or previous two weeks **AND** moderate ILI activity in region with confirmed flu A or B in current week or previous two weeks **OR** one or more outbreaks of lab confirmed /QT flu in region with confirmed flu A or B in current week or previous two weeks.

Regional

Laboratory confirmed flu A or B detected in 2 or more counties in region 2 OR 3 in current or previous two weeks **AND** elevated ILI activity in region with confirmed flu A or B in current week or previous two weeks **OR** two or more outbreaks of lab confirmed /QT flu in region with confirmed flu A or B in current week or previous two weeks.
