Note 1: Verrucous carcinoma (M-8051) is a locally aggressive, exophytic, low grade carcinoma with minimal metastatic potential. If a verrucous carcinoma is described as non-invasive or as having a broad pushing border, assign code 050. If a verrucous carcinoma is not described as non-invasive or as having a broad pushing border, assign code 070, verrucous carcinoma, NOS. If there is destructive invasion into structures in code 100 or greater, do not assign codes 050 or 070, but assign the appropriate higher code.

Note 2: Information about involvement of the corpus spongiosum or corpus cavernosum is collected in this field and in Site-Specific Factor 1 because beyond contributing to the overall assessment of extent of tumor, this factor can have an independent effect on prognosis.
