**KaposiSarcoma****CS Extension**

**Note 1:** In the United States and Canada, Kaposi sarcoma is usually an illness related to Acquired Immunodeficiency Syndrome (AIDS) which affects primarily the skin; however, lesions may also form in the connective tissue, mucosa (e.g. oral cavity) or visceral organs (e.g. lungs). For connective tissue tumors (C49.\_), use extension codes for skin.

**Note 2:** Choice of CS Extension codes for Kaposi sarcoma depends on number and location of lesions. For example, use code 110 for a single lesion involving skin; use code 210 for multiple lesions involving skin. Use code 250 for any number of lesions involving both skin and viscera.
