

## Uncontrolled Diabetes Admission Risk-Adjusted-Rate, 2014

Uncontrolled diabetes is a non-specific diagnosis, which indicates that the patient's blood sugar level is not kept within acceptable levels by his or her current treatment routine. In this report, this indicator only includes hospitalizations of patients whose principal diagnosis did not include a specified short-term complication of diabetes. It is unclear whether poor blood sugar control arises from poor quality medical care, non-compliance of patients, lack of education, or access to care problems.

### Uncontrolled Diabetes Admission Rate, 2014

Rates not calculated for counties with fewer than 5 admissions

\* Risk-adjusted rate is significantly lower than state average rate based on 95 percent confidence interval

\*\* Risk-adjusted rate is significantly higher than state average rate based on 95 percent confidence interval

County	Admissions	Population	Observed Admissions per 100,000 Population	Expected Admissions per 100,000 Population	Risk-Adjusted Admissions per 100,000 Population	95% Confidence Interval for Risk-Adjusted Rate	Mean Charge per Admission
