Cardiovascular Disease (CVD) in Texas

A Surveillance Report
December 2008

Health Promotion Unit
Texas Department of State Health Services
Burden of CVD

- Leading cause of death in Texas and in the United States
- 32% of all deaths in Texas in 2005
- 1,441,000 Texas adults reported that they have had heart disease or stroke in 2007
PROGRAM STRATEGIES

- Surveillance, Data and Outcome Management
- Health Education and Outreach
- Clinical Prevention and Treatment Services
- Community Policy and Environmental Changes

Prevalence

- The number of existing cases of a disease or health condition in a population at some designated time
- How *common* a disease is in a population
- An indication of the extent of a health problem
Prevalence

Prevalence measures the frequency of disease at a given point in time. The measure is defined as follows:

\[
\text{Prevalence} = \left( \frac{\text{Number of persons ill}}{\text{population at a given time}} \right)\%
\]

(Usually expressed as a % of the population at a given time)
Behavioral Risk Factor Surveillance System (BRFSS)

- Population-based, random-digit dialed telephone survey sponsored by DSHS in partnership with CDC
- Conducted annually by all 50 states, 3 territories, and the District of Columbia
- Randomly selected Texans 18 years or older are asked questions about their health and life style habits
- More than 550 Texans are surveyed per month.
Prevalence Questions for CVD

- **CVD**--Respondents 18 years and older who report that they have been diagnosed as having had a Heart Attack, Myocardial Infarction, Angina, Coronary Heart Disease, or Stroke.

- **Heart Disease**--Respondents 18 years and older who report that they have been diagnosed as having had a Heart Attack, Myocardial Infarction, Angina, or Coronary Heart Disease.

- **Stroke**--Respondents 18 years and older who report that they have been diagnosed as having had a Stroke.

MORTALITY DATA
Mortality Data

- Death certificate data compiled and tabulated by the Statistical Services Division of the Texas Vital Statistical Unit (VSU)
- Sex-, race- and age-specific mortality data were computed for 1999 through 2005
- All death rates are age-adjusted using the 2000 US standard population
Mortality Rate Calculation

Mortality: The occurrence of death in a population

\[
\text{Age - adjusted rate per 100,000} = \left( \frac{\text{total expected number of deaths}}{\text{2000 US population}} \right) \times 100,000
\]

Changes in Mortality Data Reporting

- ICD 9 to ICD 10
- Population standard was used for age standardization (age adjustment) of death rates. The standard is based on the year 2000 population.
Data maps are available for selected chronic disease death rates for the state as a whole and at the county level.

Maps allow the reader to identify areas in the state with high rates and areas with low rates.

Although county rates provide a high degree of specificity, rates in counties with small populations and few deaths for a specific condition can be unstable.
For each map, county specific rates are ranked from highest to lowest and then categorized into quartiles.

The maps also use a graded color scheme to differentiate each quartile, with the darkest color representing counties with the highest rates and the lightest color representing areas with the lowest rates.
Leading Causes of Death

Texas Race/Ethnic Groups
Leading Causes of Death
Texas-2005

Data Source: Texas Vital Statistical Unit (VSU), Texas Department of State Health Services, 2004
Leading Causes of Death
Texas Whites, 2005

Data Source: Texas Vital Statistical Unit (VSU), Texas Department of State Health Services, 2005
Leading Causes of Death
Texas African Americans, 2005

Leading Causes of Death
Texas Hispanics, 2005

Data Source: Texas Vital Statistical Unit (VSU), Texas Department of State Health Services, 2005
Leading Causes of Death

- In 2005, around 32% of all deaths in Texas were attributed to heart disease and stroke.
- Heart disease and stroke were the first and third leading causes of death, respectively among all racial/Ethnic groups.

Stroke (ICD 10 I60-I69)

5-year Average Age-Adjusted Mortality Rates Per 100,000, Texas 2001-2005

Data Source: Texas Vital Statistical Unit (VSU), Texas Department of State Health Services, 2001-2005
Disparities in Heart Disease and Stroke Mortality in Texas

- The overall age-adjusted mortality rates (AAMR) for ischemic heart disease (IHD) and stroke have steadily declined since 1970.
- Texas males had a higher risk of dying from IHD than females.
- Texas females had a higher risk of dying from stroke than males.
- African Americans had a higher risk of dying from IHD and stroke than Whites, Hispanics and Others.

Behavioral Risk Factors

Cigarette Smoking
Overweight/Obesity
Lack of Physical Activity
Poor Nutrition
Prevalence of Current Cigarette Smoking
Texas and US Adults, 1995-2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 1995-2007
Prevalence of Current Smoking by Demographic, Texas, 2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Adult Cigarette Smoking by Health Service Region, 2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Prevalence of Cigarette Smoking* Among Youth

Data Source: Texas Youth Risk Behavior Surveys (YRBS), Texas Department of State Health Services, 2001, 2005, 2007
High School Survey
*Percentage of Students who smoked cigarettes on one or more of the past 30 days
Overweight/Obesity

- **Adults**
  - Overweight: (BMI 25 or greater)
  - Obesity: (BMI 30 or greater)

- **Youth**
  - Overweight: (at or above the 95th percentile for BMI by age and sex)
Prevalence of Overweight or Obesity
Texas and US Adults, 1995-2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 1995-2007
Prevalence of Overweight or Obesity by Demographic, Texas, 2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Prevalence of Overweight or Obesity by Health Service Region, 2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Prevalence of Overweight among Youth

Data Source: Texas Youth Risk Behavior Surveys (YRBS), Texas Department of State Health Services, 2001, 2005, 2007
High School Survey
Lack of Physical Activity

- Regular physical activity greatly reduces a person’s risk of dying from heart disease and decreases the risk for colon cancer, diabetes and high blood pressure.
- Defined as No Leisure Time Physical Activity within the past 30 Days.
Prevalence of No Leisure Time Physical Activity, Texas and US Adults, 1995-2007

* During the past 30 days, did you participate in any physical activities or exercise? % of adults who did not participate in any physical activities during the past 30 days

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 1995-2007
Prevalence of No Leisure Time Physical Activity, by Demographic, Texas, 2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Prevalence of No Leisure Time Physical Activity, by Health Service Region, Texas, 2007

* During the past 30 days, did you participate in any physical activities or exercise?
% of adults who did not participate in any physical activities during the past 30 days

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Intake of Fruit & Vegetables < 5 times a day

- Good nutrition, including a diet that is low in saturated fats and high in fruits and vegetables, plays a key role in maintaining good health.

- Improving the American diet could extend the productive life span of Americans and reduce the occurrence of chronic diseases.
Prevalence of Fruit & Vegetable Intake < 5 Times a day, by Demographic, Texas, 2007

* % of adults who reported eating fewer than 5 servings of fruits and vegetables per day

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Prevalence of Fruit & Vegetable Intake < 5 Times a day by Health Service Region, Texas, 2007

* % of adults who reported eating fewer than 5 servings of fruits and vegetables per day

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2005

Data Source: Texas Youth Risk Behavior Surveys (YRBS), Texas Department of State Health Services, 2001, 2005, 2007 High School Survey
Behavioral Risk Factors

- The prevalence of current smoking in Texas was similar to the national average, around 19%, in 2007.
- Texas prevalence of overweight or obesity was higher than the national average in 2007.
- Texas prevalence of no leisure time physical activity was significantly higher than the national average (29% vs 24%) in 2007.
- Around 75% of adults consumed fruits & vegetables less than 5 times per day in 2007.
Medical Risk Factors

Diabetes
High Cholesterol
High Blood Pressure
Prevalence of Diabetes, Texas and US Adults, 1995-2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 1995-2007
Prevalence of Diabetes,
by Demographic, Texas, 2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Prevalence of Diabetes, by Health Service Region, 2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Prevalence of High Cholesterol, Texas and US Adults, 1995-2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 1995-2007
Prevalence of High Cholesterol, by Demographic, Texas, 2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Prevalence of High Cholesterol by Health Service Region, 2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Prevalence of High Blood Pressure, Texas and US Adults, 1995-2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 1995-2007
Prevalence of High Blood Pressure, by Demographic, Texas, 2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Prevalence of High Blood Pressure by Health Service Region, 2007

Data Source: Texas Behavioral Risk Factor Surveillance System, Texas Department of State Health Services, 2007
Medical Risk Factors

- The prevalence of diabetes among adult Texans has been rising since 1995.
- Texas prevalence of diabetes was significantly higher than the national average (10.3% vs 8.8%) in 2007.
- Texas prevalence of high blood cholesterol was similar to the national average in 2007.
- More than 27% of adult Texans reported being diagnosed with high blood pressure in 2007.
Financial Burden
Hospital Discharge Data

- Hospital discharge data has been compiled and tabulated by the Texas Health Care Information Collection (THCIC) since 1999.
- THCIC is required to provide a public use data file (PUDF) for computer-to-computer access.
- The PUDF contains patient level information for inpatient hospital stays.
Classes of Diagnoses (ICD-9 codes):

- Ischemic Heart Disease (ICD-9 codes 410-414)
- Ischemic Stroke (ICD-9 codes 430-432)
- Hemorrhagic Stroke (ICD-9 codes 433-438)
- Congestive Heart Failure (ICD-9 code 428)
Number of First-listed Hospital Discharge for Select Diagnoses, Texas, 2006,

Data Source: Texas Health Care Information Collection (THCIC), Department of State Health Services, 2006
Number of Hospital Discharges, CVD Diagnoses, Texas 2001-2006

Data Source: Texas Health Care Information Collection (THCIC), Department of State Health Services, 2001-2006
Texas Hospital Charge Data

- Estimated potential cost to payers
- Does not represent actual reimbursements
Total Hospital Charges for Selected CVD Diagnoses, Texas 2001-2006

Data Source: Texas Health Care Information Collection (THCIC), Department of State Health Services, 2001-2006
Estimated Average Hospital Charge Per Day for
Selected CVD Diagnoses, Texas 2001-2006

Data Source: Texas Health Care Information Collection (THCIC), Department of State Health Services, 2001-2006
Total Hospital Charges for Ischemic Heart Disease, by Demographic, Texas, 2006

Data Source: Texas Health Care Information Collection (THCIC), Department of State Health Services, 2006
Total Hospital Charges for Ischemic Stroke by Demographic, Texas, 2006

Data Source: Texas Health Care Information Collection (THCIC), Department of State Health Services, 2006
Total Hospital Charges for Hemorrhagic Stroke, by Demographic, Texas, 2006

Data Source: Texas Health Care Information Collection (THCIC), Department of State Health Services, 2006
Total Hospital Charges for Congestive Heart Failure, by Demographic, Texas, 2006

Data Source: Texas Health Care Information Collection (THCIC), Department of State Health Services, 2006
Hospital Discharge Data

- In 2006, the highest number of discharges for chronic disease hospitalizations was for IHD, followed by cancer, congestive heart failure and stroke.

- Estimated average hospital charges per day and total charge for selected CVD diagnoses have increased each year from 2001 to 2006.

- The number of discharges for CVD steadily declined since 2001.
More Information on THCIC

Texas Medicaid Reimbursement Data

- Represents cost to Texas/US.
- Population is low income and generally has less access to primary prevention.
- Data cannot be generalized to rest of population
Medicaid Reimbursement Data for CVD

- Data are based on paid Medicaid claims for Fee-For-Service (FFS) and Patient Care Case Management (PCCM) clients.
- Data excludes information on individuals served by Medicaid HMOs or those served by STAR+PLUS.
- Data does not include denied or pending claims.
- Data excludes the portion paid by the Medicare program and other insurance providers.
- Data is available by type of claim: physician, emergency dept., or inpatient hospital.
ICD-9 Codes for Medicaid Reimbursement Data

Ischemic Heart Disease (ICD-9 codes 410-414)

Stroke (ICD-9 codes 430-438)

Congestive Heart Failure (ICD-9 code 428)

Hypertension (ICD-9 codes 401-405)

Data Source: Fee for Service (FFS) and Patient Care Management (PCCM) clients, Texas Health and Human Services Commission, 2007.
Medicaid Reimbursement Data

- Texas Medicaid Program paid over $220 million dollars in Medicaid claims for CVD in 2007.
- Among CVD diagnose, Medicaid reimbursement was highest for ischemic heart disease followed by stroke, congestive heart failure and hypertension in 2003-2007.
- Average Medicaid reimbursement per claims for inpatient hospital was highest for stroke followed by heart disease, hypertension, and congestive heart failure in 2007.
Health Plan Employer Data and Information Set
HEDIS

- Standardized performance measures designed for comparing the quality of care of managed care organizations

**HEDIS**

**Patient Population Measured:**

A: Age 18 through 85 years diagnosed with high blood pressure, whose blood pressure was controlled below 140 mmHg systolic and 90 mm Hg diastolic.

B: Age 35 years and older of diagnosed with acute myocardial infarction (AMI) and who received an ambulatory prescription.

C: The percentage of members 18 through 75 years of age who had an LDL-C screening during the measurement year and the year prior, after discharge for an acute cardiovascular event.

D: The percentage of members 18 through 75 years of age who had an LDL-C level of less than 130 mg/dL during the measurement year, after discharge for an acute cardiovascular event.
Emergency Medical Services (EMS)
EMS Data

- Suspected CVD illness types include cardiac arrest, cardiac rhythm disturbance, chest pain/discomfort, and stroke.
- Medical-related 911 calls only (no inter-facility transfers)
- Texas residents only
- Data provide by Texas Trauma Registry
EMS Response Time for CVD, Texas Health Service Regions, 2003, 2004

EMS Response Time for Stroke, Texas Health Service Regions, 2003, 2004

Interpreting CIs

- If the confidence intervals do not overlap, the test is statistically significant.
- There is a statistically significant difference between prevalence of high blood pressure among Whites and African Americans in Texas.
Interpreting CIs

Do the CIs Overlap?

Prevalence of High Blood Pressure, Texas, 2007

- Nationwide: Prevalence (percent with 95% CI) = 45.5, 37.4
- Texas: (28.0, 30.3)
- Males: (45.5, 37.4)
- Females: (28.0, 30.3)
- Whites: (45.5, 37.4)
- Afr. Americans: (28.0, 30.3)
- Hispanics: (45.5, 37.4)
Interpreting CIs

- If the confidence intervals overlap, the test is **not** statistically significant.
- There is not a statistically significant difference between prevalence of heart disease among Health Service Region 4 and Health Service Region 5.
Interpreting CIs

- Do the CIs Overlap?
