ECI Library Matters

Social and Emotional Development (updated)

This issue of the newsletter highlights books, DVDs, and websites on social and emotional development, infant mental health, trauma, and child abuse.

For a complete list of titles on social and emotional development, please go to the library’s catalog at www.texashealthlibrary.com

If you would like to borrow any of the featured library items or receive full-text articles, please contact the Library at:

- Phone: (512) 776-7260
- Toll-Free: 1-888-963-7111 ext. 7260
- Email: avlibrary@dshs.texas.gov
- Fax: (512) 776-7474

The ECI AV Collection also contains a selection of streaming videos about children with disabilities or developmental delays. Please contact the library for logins and passwords.

In This Issue of ECI Library Matters:

**Journal Table of Contents:** Below are links to the table of contents for current issues of journals listed. The library provides access to these and many other journals. We will get you the articles you need! We also provide research services for you.

**Early Childhood Report** – Vol. 29 (3) March 2018

**Infants & Young Children** – Vol. 31 (2) April/June 2018

**Selected Books:** Access these titles and many more via the library catalog at www.texashealthlibrary.com

**Selected DVDs:** The ECI AV Collection contains audio/video resources including DVDs concerning children who have disabilities or developmental delays.

**Selected eBooks:** Access these and hundreds of additional EBSCO eBooks to read on your computer or device. Contact the library for the passwords.

**Selected Websites:** A current selection of ECI websites featured for ease of access.
Table of Contents: ECI Journals

Early Childhood Report – March 2018

Legal spotlight - you be the judge:
• May director unilaterally greenlight home-use of voice output device? p.2

Washington watch:
• Number of students served under IDEA continues to rise; State guidance on alternate assessment participation may lack key detail, report suggests. p.7

Decisions and guidance:
• IU needn’t produce test protocols to defend toddler’s evaluation. p.10
• Behavioral data, staff input point to 5-year-old’s need for special school. p.10
• Mom’s completion of form help show evaluation was sufficiently broad. p.11
• Implementing IEP several weeks after child’s 3rd birthday violates IDEA. p.11.
• Not offering make-up speech therapy sessions denies FAPE. p.12.

Cover story:
Use parent narratives to strengthen school-home partnership. p.4

Highlights:
Use visual supports to improve executive functioning skills. p.3

Checklist: natural supports for students with autism. p.5

Classroom pets boost self-regulation, empathy. p.6

Develop BIP tailored to child’s unique needs. p. 9

Infants & Young Children - April/June 2018

Teacher decision factors that lead to preschool expulsion: scale development and preliminary validation of the Preschool Expulsion Risk Measure. p. 93-108. WS Gilliam, CR Reyes.

Social and Emotional Development: eBooks

The activity kit for babies and toddlers at risk: how to use everyday routines to build social and communication skills. Deborah Fein (2016).
Leading experts present more than 100 games and activities designed to support development in children from birth to age 3. A child’s daily routines are transformed into learning opportunities that promote crucial abilities, like how to imitate others or use simple hand gestures to convey wants and needs.

The batterer as parent: addressing the impact of domestic violence on family dynamics, 2nd ed. Lundy Bancroft, Daniel Ritchie, and Jay G. Silverman (2012).
The authors outline the complex and insidious processes through which batterers hamper the social and emotional development of children. This book addresses the impact that batterers have on family functioning and provides an understanding of batterers as parents and family members. It delineates approaches to such practice issues as assessing risk to children, parenting issues in child custody and visitation evaluation, and the impact on children’s therapeutic process and family functioning in child protective practice.

Why do children do the things they do? What can caregivers do to manage it all? While there is not a simple method for understanding and managing all behaviors or all children, caregivers can give young children the social and emotional tools needed to grow and thrive on their own. The authors recommend a strength-based approach to guiding and managing young children’s behavior by helping them build and use essential life skills into the daily life of the early childhood classroom. As a result, children will learn to exhibit more pro-social behaviors, work better as a community, and become excited and active learners.

Children of substance-abusing parents: dynamics and treatment. Shulamith Lala Ashenberg Straussner (2011). This book is intended as a reference for all mental health professionals who need to understand and treat this population. It offers a look at treatment options and programmatic interventions across the life span. The contributors include a range of experts who provide evidence-based clinical and programmatic strategies for working with children of alcohol and other substance-abusing parents of any age and in almost any practice setting.

This book builds on an individualized, integrated approach to present a variety of evidence-based strategies for working with children with multiple challenges. It considers children from preschool age to adolescence with a number of severe difficulties. These may include extreme anxiety and depression, cognitive challenges, delays in speech and language, and unresolved trauma.

Social and Emotional Development (continued): eBooks

This book is a practical guide to caring for children who have experienced trauma. Focusing on the importance of interpersonal bonds to facilitate the child’s capacity to mentalize, it aims to equip the reader with the appropriate skills to provide effective, sustained and, most importantly, empathic care to the most vulnerable and troubled children. This structured psychotherapeutic approach to caregiving will enable the development of child–carer relationships and can be used to create informed, safe environments that support both the child and the caregiver.

**Foster parenting step-by-step: how to nurture the traumatized child and overcome conflict.** Kalyani Gopal (2013). This book describes the trauma that can be experienced by children in foster care and the effect of that trauma on their behavior. Gopal summarizes successful evidence-based strategies that develop the parent-child bond. Although the book was written for foster parents, it would be useful to anyone working with children who are or have been in foster care.

This book challenges the assumption that pre-school children are not capable of experiencing grief in the same way that older children do. Although young children may not express grief in the same way as older children, they still need to be supported through loss. Illustrated throughout with case examples, the author explores young children’s reactions to death and loss, both immediately after the event and over time. Full of practical advice on issues such as how to keep children in touch with their memories, answer their questions, allay their fears and explore their feelings through play, this accessible book enables adults to work with children to develop an acceptance of grief and an understanding of death and loss.

Strengthen every child using relationship-based approaches to support their behavioral, emotional, social, and learning challenges

**Infant mind: origins of the social brain.** Marc H. Bornstein (2013).
Integrating cutting-edge research from multiple disciplines, this book provides a dynamic and holistic picture of the developing infant mind. Contributors explore the transactions among genes, the brain, and the environment in the earliest years of life. The volume probes the neural correlates of core sensory, perceptual, cognitive, emotional, and social capacities. It highlights the importance of early relationships, presenting compelling findings on how parent-infant interactions influence neural processing and brain maturation.

Social and Emotional Development (continued): eBooks

John Bowlby is one of the outstanding psychological theorists of the twentieth century. This book is both a biographical account of Bowlby and his ideas and an introduction to contemporary attachment theory and research. The author traces the evolution of Bowlby's work from a focus on delinquency, material deprivation and his dissatisfaction with psychoanalysis’ imperviousness to empirical science to the emergence of attachment theory as a psychological model in its own right. The book also examines advances in the biology and neuroscience of attachment.

**Mental health services for vulnerable children and young people: supporting children who are, or who have been, in foster care.** Arlene Vetere and Michael Tarren Sweeney (2014).
More than half of children either in foster care, or adopted from care in the developed world, have a measurable need for mental health services, while up to one quarter present with complex and severe trauma- and attachment-related psychological disorders. This book outlines how services can effectively detect, prevent, and treat mental health difficulties in this vulnerable population.

**NEW! Parenting and substance abuse: developmental approaches to intervention.** Linda C. Mayles (2013).
Historically, there has been little integration of theoretical or applied research on addiction treatment and parenting intervention development. Rather, the fields of addiction and developmental research have progressed on largely separate trajectories, even though their focus powerfully and often tragically intersects each time a parent is diagnosed with a substance use disorder. This book is the first to report on pioneering efforts to move the treatment of substance-abusing parents forward by embracing their roles and experiences as mothers and fathers directly and continually across the course of treatment.

**Physical and emotional abuse: triggers, short and long term consequences, and prevention methods.** (2013).
This book includes a chapter on parent-child interaction therapy (PCIT) written by Cheryl B. McNeil, Amanda H. Costello, Ria M. Travers, and Meredith A. Norman. They review available outcome studies on PCIT with trauma, address philosophical concerns raised about PCIT’s appropriateness for children traumatized by abuse and or neglect, and provide a theoretical rationale for the therapeutic benefits of PCIT for this population.

Goodyear-Brown introduces a practical model of play therapy for traumatized children. Her model of treatment incorporates theoretical constructs with effective play therapy interventions. Clinicians have long recognized that trauma therapy is not just a matter of techniques but a journey with a beginning, middle, and end. The author codifies the process in her model, Flexibly Sequential Play Therapy (FSPT). Integrating non-directive and directive approaches, this components-based model allows for the uniqueness of each child to be valued while providing a safe, systematic journey towards trauma resolution.
Exploring the relationship between ASD and mental health difficulties, this book offers practical guidance to help parents and professionals recognize and handle co-morbid conditions, and dispels the myth that they are just a part of autism. The authors cover a wide range of common mental health problems experienced by children with ASD, including Obsessive Compulsive Disorder (OCD), anxiety, ADHD, eating disorders, psychosis, stress, tics and depression, and illustrate these issues with case studies. They also provide vital advice in an accessible format and suggest strategies to ease the difficulties which arise from these co-morbid conditions.

The first years of human life are more important than we ever realized. Robin Karr-Morse connects psychology, neurobiology, endocrinology, immunology, and genetics to demonstrate how chronic fear in infancy and early childhood, when we are most helpless, lies at the root of common diseases in adulthood.

This volume presents a systematic, research-based approach to the treatment of mental disorders. A chapter is devoted to the mental disorders of infants, children, and adolescents.

Early childcare professionals gain an understanding of the theories of attachment as well as the background and research of the prominent minds behind them. This book explains the core elements of each theorist’s work and the ways these elements impact and support interactions with babies, including the topics of bonding, feeding practices, separation anxiety, and stranger anxiety.

This textbook includes a chapter on trauma experienced in early childhood written by Staci Perlman and Andrea Doyle. It covers development in early childhood, the influence of trauma on early development, and practice implications for working with young children who have experienced trauma.

The authors devote a chapter of their book to the impact of trauma on the developing brain. A simple rubric is included as a method to recognize behaviors that may be trauma-related.

This sourcebook of practical approaches to working with children and adolescents synthesizes research from leading trauma specialists and translates it into easy-to-implement techniques. These approaches address the sensory and somatic experiences of trauma within structured formats that meet the best practices criteria for trauma-informed care: safety, self-regulation, trauma integration, healthy relationships, and healthy environments. Each chapter contains short excerpts, case examples, and commentary relevant to the chapter topic from recognized leaders in the field of trauma intervention with children and adolescents. Readers will find chapters filled with easily applied activities, methods, and approaches to assessment, and information about self-regulation, trauma integration, and resilience-building.
Brain hero: This 3-minute video shows how caregiver actions can impact child development. It was produced by the Center for the Developing Child at Harvard University. View it at http://developingchild.harvard.edu/resources/multimedia/brain_hero/.

The Center for Early Childhood Mental Health from Georgetown University translates research in healthy mental development into materials for families, mental health consultants, and Head Start staff. See http://www.ecmhc.org/.

The Center on the Social and Emotional Foundations for Early Learning has a tremendous amount of information for families, trainers, teachers, caregivers, and more. See http://csefel.vanderbilt.edu/.

The Child Welfare Information Gateway offers resources related to child abuse and neglect. See https://www.childwelfare.gov/topics/can/.

The Children’s Trauma Assessment Center (CTAC) provides comprehensive neurodevelopmental trauma assessments for children who have experienced trauma or adverse childhood experiences. See https://wmich.edu/traumacenter/about

Early Identification: Referral Requirements under CAPTA and IDEA are explained by the Early Childhood Technical Assistance Center at http://ectacenter.org/topics/earlyid/capta.asp

First3Years is an organization that has trained and mentored thousands of early childhood professionals across Texas on brain development, attachment, separation, trauma, self-regulation, cross-cultural awareness, and other infant mental health related issues. See http://first3yearstx.org/

Meeting the mental health needs of poor and vulnerable children in early care and education programs by Lenette Azzi-Lessing provides an overview of the various factors that threaten optimal development of young children living in poverty and that place them at risk for emotional and behavioral problems. Four key strategies for improving the capacity of early care and education programs for preventing and addressing mental health problems in young children in poverty are outlined in this article available at http://ecrp.uiuc.edu/v12n1/azzi.html.

The National Child Traumatic Stress Network’s mission is to raise the standard of care and improve access to services for traumatized children, their families, and communities throughout the United States. See http://www.nctsn.org/nccs/nav.do?pid=hom_main.

Promoting the social-emotional wellbeing of infants and toddlers in early intervention programs: promising strategies in four communities by Taniesha A. Woods, Sheila Smith, and Janice L. Cooper from the National Center for Children in Poverty is located at http://nccp.org/publications/pub_946.html.

The Technical Assistance Center on Social Emotional Intervention for Young Children (TACSEI) takes the research that shows which practices improve the social-emotional outcomes for young children with, or at risk for, delays or disabilities and creates free products and resources to help decision-makers, caregivers, and service providers apply these best practices in the work they do every day. See http://www.challengingbehavior.org/.

Zero to Three is a national, nonprofit organization that informs, trains, and supports professionals, policymakers, and parents in the lives of infants and toddlers. It provides several resources on early childhood mental health, including a video clip. See http://www.zerotothree.org/child-development/early-childhood-mental-health/.
