

Friendly Reminder

With the current and future heat waves it's important to ensure that the air conditioner is working correctly in all vehicles to include ground and air when transporting your patients.

These high temperatures can cause problems for your patients, medications and for yourself.

So let's do this because it is in the best interest of patient care not just because it is requirement of TAC 157.11(e) (4)

Please stay rehydrated, stay cool and stay safe.

Thank you!
