1. Due to differences in methodology, 1988 figures cannot be compared in this tobacco category.

2. In 2008, the question of specific-inhalant types was deleted and only generic-inhalant question was surveyed in the secondary school survey. The 2008 figures, thus, cannot be compared properly to the figures in other survey years. Since 2010, the question of specific-inhalant types was revised accordingly to reflect the latest trend in inhalants.
3. Since 2004, the question wording has been changed slightly to list 'Mushrooms' as an example of hallucinogens.
4. In 2014, schools were used as the primary sampling unit (rather than districts) due to decreasing participation from schools.

1. Due to differences in methodology, 1988 figures cannot be compared in this tobacco category.
2. In 2008, the question of specific-inhalant types was deleted and only generic-inhalant question was surveyed in the secondary school survey. The 2008 figures, thus, cannot be compared properly to the figures in other survey years. Since 2010, the question of specific-inhalant types was revised accordingly to reflect the latest trend in inhalants.
3. Since 2004, the question wording has been changed slightly to list 'Mushrooms' as an example of hallucinogens.
4. In 2014, schools were used as the primary sampling unit (rather than districts) due to decreasing participation from schools.
