# Assessing and Managing Visual Changes related to MDR-TB Medications

Presented by Marybel Monreal, BSN, RN

## Objectives

- Vision changes related to TB medications
- Identification of causative agents
- Clinical manifestations of vision changes
- Tool utilization
- Nursing considerations

### Common vision changes related to TB medications:

### **Retrobulbar Neuritis**

Swelling to the optic nerve which carries light signals from the back

of your eye so you can see.

### **Optic Neuropathy**

Damage to the optic nerve from

any cause.

### **Anterior Uveitis**

Inflammation of the iris near the front of the eye. The iris defines eye color, secretes nutrients to keep the lens healthy, and controls the amount of light that enters the eye by adjusting the size of the pupil

## Causative Agents

Ethambutol (EMB)

- Bacteriostatic
- Aids in the prevention of RIF resistance when INH resistance is suspected

Linezolid (LZD)

- Bactericidal
- Should not be administered with monoamine oxidase inhibitors (MAOIs).

Rifabutin (RFB)

#### Uveitis

- Alternative for drugdrug interaction or intolerance to RIF
- Often used in place of RIF in HIV co-infected patients

L P D

Clinical Manifestations of Visual Changes

20/400

# **Clinical Manifestations**

- Pain when moving eyes
- Blurred vision
- Decreased visual acuity
- Central scotomas (floaters, blind spot)
- Loss of red-green color vision
- Eye redness
- Light sensitivity

# Tool Utilization:

### **Ishihara Plates:**

- Color vision deficiency assessment
- Baseline and monthly

### **Snellen or Tumbling "E" Chart:**

- Visual acuity assessment
- Baseline and monthly

TEXAS Health and Human Services	Texas Departmer Health Services
---------------------------------------	------------------------------------

Red/Green Color Discrimination:	
The (X) mark indicates the plate cannot be read. Screen all 14 plates.	Client must pass 10 of the first 11 plates for the test to be regarded as normal. Refer for
evaluation if $\leq 7$ plates are read as normal.	
Results: [N] = Normal [A] = Abnormal	

## Ishihara

#### Snellen **Tumbling E**

### Nursing considerations: Changes in vision from baseline

- Stop offending medication
- Refer patient to ophthalmologist
- Do not restart likely offending medication unless another cause of the neuritis or vision problem is identified
- Exception RBF may be reinstituted at a lower dose

### **Ethambutol**

- The dosing interval of EMB should be adjusted if the creatinine clearance is <50 mL/min to minimize ocular toxicity.
- If neuritis is severe consider discontinuing EMB and INH.

### Rifabutin

- Consider other etiologies, especially in HIV (+) individuals.
- Exclude bacterial and viral infections.
- Doses >300 mg daily can cause panuveitis that is reversible with dose adjustments.

## Nursing Considerations:

- Conduct baseline visual acuity assessment
  - Snellen chart and Ishihara plates
- Monthly monitoring:
  - Visual acuity and color discrimination assessment (TB-205)
  - Serum glucose and HgbA1c educate and encourage improving glucose control
  - Creatinine clearance
- Educate patients to report any changes in vision
- Improve nutrition

*Note:* Often times visual symptoms subside after the offending medication is stopped as soon as a toxicity is recognized. <u>Early detection is key to preventing</u> *permanent visual changes*.

## Practicum: Vision Screening

# Ishihara Testing

- Materials and Preparation:
  - Ishihara's Test for Color Deficiency, 14 plates edition.
  - Ishihara's Design Charts for the Colour Deficiency of Unlettered Person's.
  - Well lit room (natural day light preferred)
  - Comfortable chair for patient
- Instructions:
  - Hold 75 cm from the patient (~arm length)
  - Sit and tilt plate at right angle to patients line of vision
  - Screen all plates
- Documentation:
  - Baseline and monthly
  - Mark (X) if plate cannot be read
  - Must pass 10 or 11 plates for test to be regarded as normal
  - Refer for evaluation if 7 or less plates are read as normal

**Red/Green Color Discrimination:** 

The (X) mark indicates the plate cannot be read. Screen all 14 plates. Client must pass 10 of the first 11 plates for the test to be regarded as normal. Refer for evaluation if  $\leq 7$  plates are read as normal.

Results: [N] = Normal [A] = Abnormal

## **Snellen Eye Test**

#### Materials and preparations:

- Snellen or Tumbling "E' chart with screening distance of 10 or 20 feet
- Quiet area
- Room that accommodates for screening distance at 10 or 20 feet.
- Uncluttered, nonpatterned wall for chart placement
- Well lit area, without shadows or glare
- Measuring tape
- Masking tape
- Eye Occluder
- Pointer
- Screening form (TB-205)

### Instructions:

- Place chart on a wall at the patient's eye level
- Measure 10 or 20 feet from wall and place tape on floor to mark a line
- Have patient stand with heels on the marked line (if seated, align back of chair with line).
- Determine the "beginning" or "practice line"
- Typically for persons 5 years and older beginning line is 20/40. Move up or down a line depending if the patient successfully reads line.
- Screen right eye first, then left, then both.

- Have the patient cover left eye with occluder and remind to keep both eyes open, then repeat with other eye.
- Place tip of pointer directly below each symbol to be read
  - Use linear method and follow a snake-like pattern).
- Record the last line read accurately.
  - If only 1 letter is missed continue to next line
  - To pass a line, the patient must identify one more than half of the symbols on the line.
- If initial screen was conducted with corrective lenses, follow-up screens must be done the same.
- Change of 1 or more lines from the initial screen must be reported to the physician immediately.

Visual Acuity:

If initial screen was conducted with corrective lenses (glasses or contacts), follow-up screens must be done the same. A change of 1 or more lines from the initial screen in either one or both eyes must be reported to the physician immediately. **Results:** [P] = Pass [F] = Fail [U] = Unscreenable **Chart Used:** [V] Letter [] "E" [] Other, Specify:\_\_\_\_\_
