# Texas Influenza Surveillance Report 2022-2023 Season/ 2023 MMWR Week 26

(June 25, 2023 – July 1, 2023) Report produced on 07/07/2023

### Summary

\*This report excludes COVID-19 data. For information about COVID-19 in Texas visit <u>https://www.dshs.texas.gov/covid-19-home</u>. Compared to the previous week, the percentage of specimens testing positive for influenza reported by hospital laboratories has decreased. The percentage of patient visits due to influenza-like illness (ILI) has increased. No influenza-associated pediatric deaths were reported. No influenza-associated outbreaks were reported in a long-term care or school facility.

Table 1: Summary of Texas Influenza (Flu) and Influenza-like Illness (ILI) Activity for the Current Week<sup>†</sup>

†Data displayed have been updated since last week's flu report with any new reports received.

## Laboratory Results

### Influenza

Hospital laboratories across Texas voluntarily report influenza tests (antigen, culture, and PCR) to the National Respiratory and Enteric Virus Surveillance System (NREVSS). Providers throughout Texas also submit specimens for influenza testing (PCR) to Texas public health laboratories, including the Texas Department of State Health Services (DSHS) state laboratory in Austin and the nine Texas Laboratory Response Network (LRN) laboratories. The results reported by Texas NREVSS participants and public health laboratories for the current week are summarized in the two tables below. Additional influenza test results (rapid tests, culture, PCR) and ILI activity were reported from providers and public health departments throughout the state (see county map at the end of this report).

Table 2: Influenza Testing Performed by Texas Hospital Laboratories for the Current Week<sup>†</sup>

|   | Week 26     | Season to Date<br>Week Ending:<br>July 1, 2023 |
|---|-------------|--|
| Number of labs reporting flu tests                          | 17          |  |
| Number of specimens tested                                  | 2671        | 302037   |
| Number of positive specimens (%)                            | 35 (1.31%)  | 38941 (12.89%)                                 |
| Percentage of total tests that were antigen detection tests | 22.20%      |  |
| Positive specimens by type/subtype                          | [n (%)]     |  |
| Influenza A   | 14 (40.00%) | 37161 (95.43%)                                 |
| Subtyping performed   | 7 (50.00%)  | 6126 (16.49%)                                  |
| A (H1N1)  | 7 (100.00%) | 1745 (28.49%)                                  |
| A (H3N2)  | 0 (0.00%)   | 4381 (71.51%)                                  |
| Subtyping not performed                                     | 7 (50.00%)  | 31035 (83.51%)                                 |
| Influenza B   | 21 (60.00%) | 1780 (4.57%)                                   |

†Laboratory data in 2022-2023 season reports may not be comparable to reports from previous seasons because the data only includes hospital laboratories data for the current season.

### Table 3: Influenza Testing Performed by Texas Public Health Laboratories for the Current Week<sup>†</sup>

|  | Week 26   | Season to Date<br>Week Ending:<br>July 1, 2023 |
|--|-----------|--|
| Number of labs reporting flu tests           | 0         |  |
| Number of specimens tested                   | 0         | 3610   |
| Number of positive specimens (%)             | 0 (0.00%) | 520 (14.40%)                                   |
| Positive specimens by type/subtype/lineage [ | n (%)]    |  |
| Influenza A                                  | 0 (0.00%) | 481 (92.50%)                                   |
| Subtyping performed                          | 0 (0.00%) | 425 (88.36%)                                   |
| A (H1N1)                                     | 0 (0.00%) | 185 (43.53%)                                   |
| A (H3N2)                                     | 0 (0.00%) | 240 (56.47%)                                   |
| Subtyping not performed                      | 0 (0.00%) | 56 (11.64%)                                    |
| Influenza B                                  | 0 (0.00%) | 39 (7.50%)                                     |
| Lineage testing performed                    | 0 (0.00%) | 34 (87.18%)                                    |
| B/Victoria                                   | 0 (0.00%) | 34 (100.00%)                                   |
| B/Yamagata                                   | 0 (0.00%) | 0 (0.00%)                                      |
| Lineage testing not performed                | 0 (0.00%) | 5 (12.82%)                                     |
| Other*                                       | 0 (0.00%) | 0 (0.00%)                                      |

\*Other denotes specimens with coinfections (i.e. one specimen was positive for both influenza A (H1N1) and influenza A (H3N2))

+Laboratory data in 2022-2023 season reports may not be comparable to reports from previous seasons because the data only includes hospital laboratories data for the current season.

### Other Respiratory Viruses

The NREVSS system collects information on a variety of respiratory viruses in addition to influenza including parainfluenza virus, respiratory syncytial virus (RSV), rhinovirus, human metapneumovirus (HMPV), seasonal coronavirus, and respiratory adenovirus. The results for the current week are summarized below.

Table 4: Non-Influenza Respiratory Virus Testing Performed by Texas NREVSS Laboratories for the Current Week

| Virus   | Number of<br>Laboratories<br>Testing | Tests<br>Performed | Positive<br>Tests | Percentage of Tests<br>Positive |
|---|--------------------------------------|--------------------|-------------------|---------------------------------|
| Adenovirus (respiratory)  | 12                                   | 1482               | 112               | 7.56%                           |
| HMPV  | 11                                   | 1460               | 17                | 1.16%                           |
| Parainfluenza virus   | 12                                   | 1482               | 87                | 5.87%                           |
| Rhino/enterovirus   | 12                                   | 1482               | 295               | 19.91%                          |
| RSV <sup>†^</sup>   | 15                                   | 1922               | 34                | 1.77%                           |
| Seasonal coronavirus (does not<br>include MERS-CoV or COVID-19) | 12                                   | 1482               | 15                | 1.01%                           |

<sup>†</sup>RSV tests displayed in the table are a combination of antigen detection, PCR, and culture tests. Some non-NREVSS reporters also contribute to the RSV data.

^ Numbers and percentage may differ from the weekly RSV report. The weekly RSV report may be accessed at https://www.dshs.state.tx.us/RSV/disease/rsv-Data.aspx.

## U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet)

Table 5: Texas ILINet Reporting and Patient Visit Summary for the Current Week

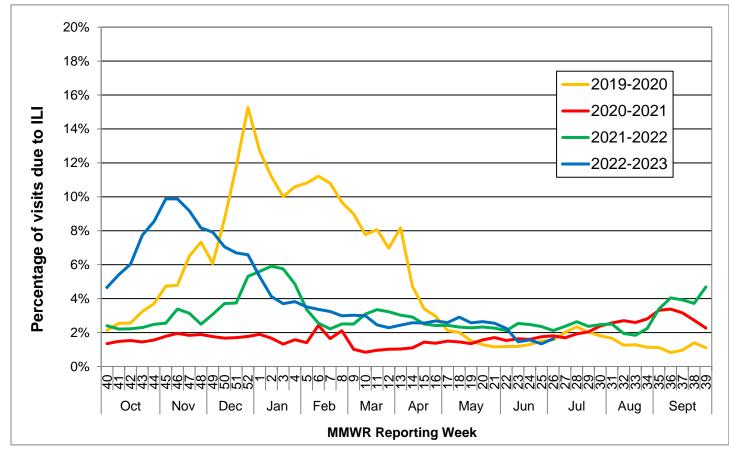

|  | Week 26     |
|--|-------------|
| Number of providers reporting                      | 48          |
| Number of providers reporting patient visits       | 48          |
| Number (%) of providers with at least one ILI case | 41 (85.42%) |
| Percentage of all visits due to ILI                | 1.64%       |
| Texas ILINet baseline <sup>‡</sup> , 2022-2023     | 4.85%       |

<sup>+</sup>The baseline is the mean percentage of patient visits for ILI during non-influenza weeks for the previous three seasons plus two standard deviations. A "non-influenza week" is defined as a week that accounted for less than 2% of the season's total number of specimens that tested positive for influenza

Special Note: The case definition was changed to capture respiratory pathogens causing illness, including CoVID-19, through the ILINet. The Influenzalike Illness (ILI) case definition for the 2022-2023 season is a patient with fever (≥ 100°F, 37.8°C) AND cough and/or sore throat. There is no longer a restriction on the cause.

Table 6: Percentage of Visits for Influenza-like Illness Reported by Texas ILINet Providers (as of 07/05/2023 04:25PM)

| Week   | Providers | Num  | ber of ILI C | ases by Ag | ge Group (\ | (ears) | Total ILI  | Total    | 0/ 11 1 |
|--------|-----------|------|--------------|------------|-------------|--------|------------|----------|---------|
| week   | Reporting | 0-4  | 5-24         | 25-49      | 50-64       | 65+    | (all ages) | Patients | % ILI   |
| 202240 | 59        | 894  | 1298         | 272        | 104         | 62     | 2630       | 56384    | 4.66%   |
| 202241 | 62        | 1101 | 1590         | 401        | 164         | 72     | 3328       | 61532    | 5.41%   |
| 202242 | 60        | 1113 | 1874         | 448        | 201         | 84     | 3720       | 61711    | 6.03%   |
| 202243 | 61        | 1460 | 2704         | 573        | 226         | 106    | 5069       | 65582    | 7.73%   |
| 202244 | 62        | 1569 | 3068         | 692        | 269         | 128    | 5726       | 66979    | 8.55%   |
| 202245 | 61        | 1405 | 2524         | 573        | 431         | 130    | 5063       | 51247    | 9.88%   |
| 202246 | 50        | 1106 | 1833         | 437        | 159         | 142    | 3677       | 37234    | 9.88%   |
| 202247 | 61        | 1431 | 1874         | 1058       | 377         | 208    | 4948       | 53884    | 9.18%   |

Note: The 2020-2021 Flu Season contains MMWR week 202053. For graphical display compatibility with seasons containing 52 weeks, average values were generated using MMWR week 52 and 1 for Seasons: 2019-2020, 2021-2022, and 2022-23.

# **Reports from Health Service Regions**

Reports were received from eight Health Service Regions (HSRs) during week 26.

| Table 7: Influenza Activity compared to week 25 by Health Service Region (HSR) |
|--|
|--|

| Influenza Activity Comp | arison                     |
|-------------------------|----------------------------|
| Increased               | 7                          |
| Same                    | 2/3                        |
| Decreased               | 1, 4/5N, 6/5S, 8, 9/10, 11 |
| Unsure                  |                            |

# Variant Influenza Viruses

No variant or novel influenza viruses have been detected in Texas during the 2022-2023 season.

# Institutional Outbreaks and School Closures

No newly identified influenza-associated institutional outbreaks were reported in week 26.

# P&I Mortality Surveillance Data

\*Deaths due to COVID-19 may be classified as pneumonia deaths or influenza deaths (deaths due to "flu" or "flu-like illness") in the absence of positive SARS-CoV-2 test results. Pneumonia and influenza (P&I) death data are obtained from death certificates of Texas residents whose underlying or contributing cause(s) of death is reported as pneumonia or influenza. P&I deaths are identified based on ICD-10 multiple cause of death codes. P&I deaths are based on ICD-10 pneumonia and influenza mortality codes. Eight thousand and fifty-nine (8059) P&I deaths have been reported in Texas during the 2022-2023 influenza season.

Table 8: Texas P&I Deaths Occurring October 2, 2022-July 1, 2023, by Age

| Age Category | Number of P&I       | Mortality Rate |
|--------------|---------------------|----------------|
| (years)      | Deaths <sup>+</sup> | (per 100,000)  |
| 0 - 4        | 45                  | 2.04           |
| 5 - 17       | 28                  | 0.5            |
| 18 - 49      | 579                 | 4.21           |
| 50 - 64      | 1428                | 27.14          |
| 65 +         | 5979                | 135.56         |
| Overall      | 8059                | 25.85          |

\*NOTE: Data are provisional and subject to change, errors, and duplicates

\*\* If the cell count is less than 10, the number of P&I deaths is suppressed and <10 is written in the cell.

### Table 9: Texas P&I Deaths Occurring October 2, 2022– July 1, 2023, by Health Service Region (HSR)

| HSR     | Number of P&I<br>Deaths⁺ | Mortality Rate (per 100,000) |
|---------|--------------------------|------------------------------|
| 1       | 301                      | 31.34                        |
| 2/3     | 2232                     | 25.31                        |
| 4/5N    | 654                      | 42.06                        |
| 6/5S    | 1955                     | 22.57                        |
| 7       | 898                      | 25.4                         |
| 8       | 865                      | 20.49                        |
| 9/10    | 423                      | 40.48                        |
| 11      | 729                      | 30.68                        |
| Unknown | 2                        | -                            |
| Overall | 8059                     | 25.85                        |

\*NOTE: Data are provisional and subject to change, errors, and duplicates

\*\* If the cell count is less than 10, the number of P&I deaths is suppressed and <10 is written in the cell.

## Influenza-Associated Pediatric Mortality

No influenza-associated pediatric mortalities were reported in week 26.

<u>Twelve</u> influenza-associated pediatric mortalities have been reported in Texas during the 2022-2023 influenza season. Cases of influenza-associated pediatric mortality (children <18 years of age) are reportable year-round by law in Texas.

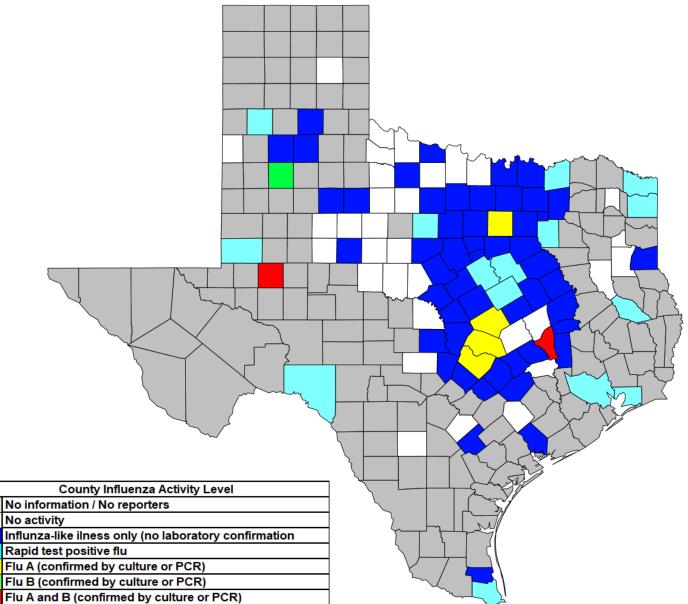

| Month of<br>Pediatric<br>Death | Influenza<br>A (H1N1) | Influenza<br>A (H3N2) | Influenza<br>A (Not<br>Subtyped) | Influenza<br>B | Influenza, Not<br>Typed / Not<br>Differentiated | Influenza virus<br>co-infection: A<br>(not subtyped)<br>and B | Total, All<br>Influenza<br>Types /<br>Subtypes |
|--------------------------------|-----------------------|-----------------------|----------------------------------|----------------|---|---|--|
| 2022                           |                       |                       |                                  |                |   |   |  |
| October                        | 0                     | 2                     | 0                                | 1              | 0   | 0   | 3  |

| July                           | 0                     | 0                     | 0                                | 0              | 0   | 0   | 0  |
| Total*                         | 1                     | 6                     | 3                                | 2              | 0   | 0   | 12   |

Table 10: Influenza-Associated Pediatric Deaths Reported in Texas during the 2022-2023 Season

\*Total count of typed cases may be adjusted as lab testing and case investigations are completed.

## Statewide Influenza Activity Map

Figure 5: Texas Map Displaying the Highest Level of Influenza or ILI Activity Reported by County for the Week Ending July 1, 2023 (MMWR Week 26)

Please note: The majority of influenza cases are not reportable by law in Texas. This map contains data from sentinel sites and only displays influenza and ILI cases that were reported to public health. Positive laboratory results are reported according to specimen collection date, or date received in the laboratory if the former is unknown.

## **Texas Influenza Surveillance Components and Measures**

Activity codes (see http://www.cdc.gov/flu/weekly/overview.htm)

### Statewide influenza activity level

A code reported weekly by states and territories to CDC indicating the geographic spread of influenza in the state. Levels are no activity, sporadic, local, regional, and widespread.

#### ILINet Activity Indicator

A statewide level of influenza-like illness intensity (on a scale of 1-10, with 1 being the lowest level) assigned to each state weekly by CDC based on data reported through ILINet.

### **Morbidity**

### Novel/variant influenza

Thorough investigations are performed on all cases of novel/variant influenza. This condition is reportable by law in Texas.

Texas ILINet

Providers voluntarily report weekly to CDC's ILINet system on the number of outpatient visits for ILI and total outpatient visits. Providers may submit up to 5 specimens per month for influenza testing. See <a href="http://www.dshs.state.tx.us/idcu/disease/influenza/surveillance/ILINet/">http://www.dshs.state.tx.us/idcu/disease/influenza/surveillance/ILINet/</a> for information on how to become an ILINet provider.

#### ILI activity

Non-ILINet providers report ILI or influenza data weekly to local or regional health departments.

#### Outbreaks

Healthcare, schools, childcare, and correctional facilities report ILI and influenza outbreaks to health departments in Texas. This condition is reportable by law in Texas.

### Mortality

Pneumonia and Influenza (P&I) Mortality Surveillance

The DSHS Vital Statistics Unit collects death certificate information for all deaths on Texas residents from various partners such as funeral homes and local registrars around the state. The death certificates are then sent to the National Center for Health Statistics (NCHS) where the cause of death and underlying causes of death on the death certificates are coded with ICD-10 mortality codes. Once death certificates are coded, the information is sent back to DSHS Center for Health Statistics (CHS). CHS produces a Weekly Pneumonia and Influenza (P&I) Death Report and sends it to the State Influenza Surveillance Coordinator for inclusion in the Texas Weekly Flu Report. P&I deaths are identified based on ICD-10 multiple cause of death codes, and in particular, pneumonia and influenza mortality codes. Delays inherent in death reporting and coding practices may cause the number of reported P&I deaths to vary considerably each week.

### Influenza-associated pediatric deaths

Deaths that are associated with influenza in children < 18 years of age are reported to health departments in Texas. *This condition is reportable by law in Texas*. <u>http://www.dshs.state.tx.us/idcu/disease/IAPM/</u>

#### Laboratory

#### DSHS Austin laboratory

Providers voluntarily submit specimens to the DSHS Austin laboratory for influenza PCR testing throughout the season. Providers sign up for this program through their local health departments.

Laboratory Response Network (LRN) laboratories

Providers voluntarily submit specimens to one of the 9 Texas LRNs for influenza PCR testing throughout the season. Providers sign up for this program through their local health departments.

#### NREVSS

Laboratories voluntarily report influenza and other respiratory virus data weekly through the CDC's online NREVSS reporting system. Laboratories sign up for this program by contacting DSHS. http://www.cdc.gov/surveillance/nrevss/
