

Texas Vaccines for Children (TVFC) Provider,

Providers will not be able to order nirsevimab (Beyfortus™) in VAOS after Friday, March 22, 2024, at 5 p.m. CDT. Providers will be able to order Beyfortus™ in VAOS later in 2024 when the Centers for Disease Control and Prevention (CDC) make it available.

The Advisory Committee on Immunization Practices (ACIP) recommends eligible infants be vaccinated with Beyfortus™ by March 31, 2024. However, providers should not administer Beyfortus™ after March 31, 2024, until the next RSV season in fall 2024. If providers have Beyfortus™ doses which were not administered before March 31, 2024, and have not expired, they should keep doses at an appropriate refrigerated temperature for the following RSV season.

Additional information on eligibility and the seasonality of this vaccine is available from the [CDC's RSV Prevention Information](#) page. Prescribing information is available from the [nirsevimab package insert](#).

For questions regarding ordering Beyfortus™, email TXVaccineOrders@dshs.texas.gov.

Thank you for your continued cooperation,

Texas Department of State Health Services
