Dear Texas Vaccines for Children (TVFC)/Adult Safety Net (ASN) Provider,

As of Friday, October 7<sup>th</sup>, the error received when attempting to save Doses Administered records for numerous inventory records in the Vaccine Allocation and Ordering System (VAOS) **has been resolved**. Providers no longer have to report small amounts of doses administered records at a time and can resume the usual reporting procedure.

As a reminder, providers are required to complete Doses Administered reporting up to the current date in order to place a vaccine order. In order to select a facility in the drop down menu to continue to the Open Ordering Page, providers must upload a Temperature Log and complete Doses Administered in addition to completing other TVFC/ASN monthly reporting requirements. **This reporting must be completed the same day an order is placed in order to access the TVFC/ASN Open Ordering page and submit a vaccine order.**

Please ensure that you report Doses Administered up to the current date. To ensure that you reported accurately, your date range on the Doses Administered Data Entry Page will show today's date (example below). If you have a date range in the past, you will not be able to select your facility and place an order.

Enter doses administered for the date range below

From	To
7/6/2022	7/6/2022

For any questions, please contact your Responsible Entity (RE). Thank you for your continued participation in the TVFC/ASN Programs.
