Texas Department of State Health Services

*For more information about areas with active Ebola transmission, call your local health department.***

**During an Ebola outbreak period, fever is not required to meet the PUI (suspect) case definition. Although the clinical case criteria may not require fever to be present, at least one other Ebola-compatible symptom, and an epidemiologic risk factor must be present to meet the PUI (suspect) case definition. These scenarios will be reviewed on a case by case basis.
