### How do I care for microfiber towels?

You can use your microfiber towel hundreds of times. Follow these easy steps to help your towels last.

1. Always wash your microfiber towels separately. Lint from other clothes will reduce absorbency of your microfiber towels.
2. Only use detergent. Fabric softener will reduce absorbency.
3. Wash in warm water to remove germs and dirt.
4. Let the towels air dry if possible for the greatest absorbency.

### Why choose microfiber towels?

#### Make Microfiber Towels Work for You

- Microfiber towels easily pick up dust and dirt prior to sanitizing and disinfecting. There's no need to buy special disposable dusters.
- Use your microfiber towels with soap and water to scrub grimy messes. This creates less waste than using multiple paper towels.
- Use towels to clean up spills. They are more absorbent than paper or other cloth towels.
