Black Women and HIV in Texas

The Big Picture
Since 2012, the number of new HIV diagnoses among Black women living in Texas has decreased by 24 percent. Still, as of 2021, Black women have the highest rate of new HIV diagnoses compared to women of other races/ethnicities. In 2021, there were 11,788 Black women living with HIV in Texas. Although Black women make up only 13 percent of the Texas female population, they are 56 percent of women living with HIV. This shows the continued need to promote HIV prevention and education in Black women.

Black Women Living with HIV in Texas
The rate of Black women living with HIV in Texas (631 per 100,000 population) is 6.9 times the rate of Hispanic women living with HIV and 13.6 times the rate of White women living with HIV.

The most common way Black women in Texas get HIV is through sex with a male living with HIV (83 percent).

An early diagnosis of HIV infection helps people get the care they need to stay healthy. Being diagnosed with HIV late (within a year of an AIDS diagnosis) reduces treatment effectiveness. In 2021, 25 percent of Black women diagnosed with HIV in Texas received a late diagnosis.

One in every 156 Black women in Texas is living with HIV.

Black Women Without HIV-Related Medical Care in 2021
More than ever before, advances in medical care have enabled people with HIV to stay healthy and live longer. Some persons living with HIV may not seek care because they do not feel ill. Others may have problems affording or accessing health care. Still others may not seek medical care because of substance abuse, mental health issues, or HIV-related stigma.

More Black persons living with HIV (PLWH) (12,105) did not receive HIV medical care in 2021 compared to other racial and ethnic groups in Texas. Nearly one in three Black women living with HIV in Texas (3,572) were out of care in 2021.

Of Black women living with HIV in Texas whose mode of HIV transmission was sex with males:
- 77 percent had at least one medical visit or lab test for their HIV infection,
- 70 percent had at least two medical visits or lab visits at least three months apart, and
- 60 percent achieved viral suppression.
HIV Prevention for Black Women in Texas

Factors contributing to HIV transmission among Black women can include stigma, trauma, relationship dynamics, poverty, unemployment, and a lack of education. For more information on how to get involved in HIV prevention for Black women in Texas, please contact the DSHS HIV/STD Section at hiv.std@dshs.texas.gov.

Texas Black Women's Initiative (TxBWI)

The mission of the Texas Black Women's Initiative (TxBWI) is to promote active, engaged, and empowered communities to address HIV disparity among Black women. TxBWI works to strengthen the ability of DSHS, local health departments, and community-based organizations to effectively implement HIV/AIDS programs focused on Black women. For more information, visit dshs.texas.gov/hivstd/TxBWI/.
