

# COVID-19 Telemedicine Implementation ECHO

---

Waridibo Allison MD, PhD

Assistant Professor/Infectious Disease

Program Director UT Health San Antonio ECHO

Program Director UT Health San Antonio South Central AETC

Medical Director - San Antonio AIDS Foundation

# A solution to a community need

---

- We recognized a community need:
  - COVID-19 pandemic forced sudden telemedicine shift
  - Lack of clear guidance on evolving regulation and billing changes
  - Lack of practical guidance on rapid telemedicine launch that discusses spectrum of telemedicine modalities
  - Critical to discuss **short-term** and **long-term** considerations for telemedicine launch

# Overview

---

**March 19**

## Planning

- Assemble, train hub
- Develop didactics
- Promotion and recruitment
- Registration survey

**March 30**

## Launch

- Weekly sessions, 12-1:15 CDT
- Weekly planning meetings
- Session recordings, web updates
- Resource sharing between sessions

**Through July 8**

## Maintenance

- 10 sessions (originally planned for 6-8)
- Adaptive topic planning
- Process refinement
- Sustainability planning

# Hub Panel

Waridibo Allison MD, PhD: Assistant Professor/Infectious Disease, Medical Director, San Antonio AIDS Foundation

Mari Robinson JD: Director, UT System Virtual Health Network

Oliver Black: IT Expert, UT System Virtual Health Network

Margaret Adjei PharmD: Community Pharmacist

Paula Winkler MEd: Director , South Central Area Health Education Center (AHEC)

Raudel Bobadilla BS: UT Health San Antonio, South Central AETC Program Manager, CHW on various projects

## Facilitation, coordination, & IT:

Andrea Rochat MFA

Keito Kawasaki MPH

Kesi Williams MPH

Raudel Bobadilla BS, CHW

**COVID-19 Telemedicine Implementation ECHO**

**COVID-19 has changed how we deliver care**

The COVID-19 pandemic is forcing health care systems to quickly adopt protocols and technologies that reduce the risk of viral transmission, conserve resources, and maintain high-quality patient care. The transition to telemedicine can take months or years to do successfully, but the urgency of this moment requires immediate, deliberate action.

We are hosting a **COVID-19 Telemedicine Implementation ECHO** to share practical guidance for rapid launch of telemedicine modalities, from telephone consultations to platforms fully integrated into the electronic medical record.

Each week, we will offer a brief didactic on assessing clinic telemedicine capabilities, selecting suitable software and hardware, and maintaining clinical excellence in care delivery. This will be followed by a short case presentation of real clinics implementing telemedicine, followed by robust interactive discussion.

**Sessions every Monday: 12-1:15 pm**  
Participation is free and all are welcome

**Register:** <https://tinyurl.com/ryh9vx9>

**What is ECHO?**

ECHO® (Extension for Community Healthcare Outcomes) uses videoconferencing to connect health care workers to a multi-disciplinary team of experts to share knowledge and build capacity for delivering best-practice care.

**Multidisciplinary team**

**Waridibo Allison MD, PhD:** Assistant Professor/Infectious Disease, Medical Director, San Antonio AIDS Foundation  
**Mari Robinson JD:** Director, UT System Virtual Health Network  
**Oliver Black:** IT Expert, UT System Virtual Health Network  
**Margaret Adjei PharmD:** Community Pharmacist  
**Paula Winkler MEd:** Director, South Central Area Health Education Center (AHEC)  
**Raudel Bobadilla BS:** UT Health San Antonio, South Central AETC Program Manager, CHW/various projects

## Reasons for registering for the ECHO session

# Participant questions

---

- **Specific equipment**, HIPAA regulations on web conferencing during COVID-19, best applications and solutions (Doximity app, facetime, other solutions)
- If clinics close and providers/care team continue to see clients via telemedicine - what could we do to keep the **care team on the same page** to increase smooth transitions between the care team members?
- What processes are recommended if/when the **telemedicine platform** does not integrate with the EHR system?
- If a patient is unfamiliar with technology in general, the visit may be less fruitful (and potentially harmful if misdiagnosis results), what are the opinions on screening **patients** for familiarity with **basic computer equipment/processes** before offering telemedicine appointments?
- How to maintain **confidentiality in a telehealth setting**.
- What strategies are implemented for **home or mail-in testing**?
- How do you comply with **privacy and confidentiality standards**? At what point would a client be required for in person visit?
