

Table 4: Galactosemia

Overall Result	Disorder	Screening Result	Screening Result Note
Normal	Galactosemia	Normal	
Abnormal	Galactosemia	Abnormal	Possible Galactosemia. GALT activity Low. If this is the first screen, recommend serum GALT enzyme within 24 hours and immediate telephone consultation with a pediatric metabolic specialist. Otherwise, follow recommendations received from Clinical Care Coordination. DNA report to follow.
Abnormal	Galactosemia	Abnormal	GALT activity Indeterminate. Result may be due to limitation of the test method and should be considered in context of the child's clinical status. If this is the second screen, follow recommendations received from Clinical Care Coordination. Otherwise, repeat the newborn screen within 7 days. DNA report to follow.
