HEAD LICE LAW? The rule requiring children be excluded from school if found to have lice has changed. If a child is found to have live lice, it is no longer required to send them home. This applies to nits as well.

The rule change doesn’t mean “exclusion” has to be eliminated from the district’s policy. School districts can set their own policies to meet the needs of the school community. Talk to your district School Health Advisory Council to change or develop policies on head lice which may include topics such as “exclusion,” or “parental notification”. See the Texas Department of State Health services webpage on head lice for additional suggestions for policy development.

The American Academy of Pediatrics states that “No healthy child should be excluded from or allowed to miss school time because of head lice. No-nit policies for return to school should be abandoned. Because the child poses little risk to others and does not have a resulting health problem, he or she should remain in class, but be discouraged from close direct head contact with others.” The National Association of School Nurses states; “the management of pediculosis (infestation by head lice) should not disrupt the educational process. No disease is associated with head lice …. Children found with live head lice should remain in class but be discouraged from close direct head contact with others. The school nurse should contact the parents to discuss treating the child at the conclusion of the school day…. Research data does not support immediate exclusion upon the identification of presence of live lice or nits as an effective means of controlling pediculosis transmission.”

No Nit Policies -- The Texas Department of State Health Services (DSHS), the American Academy of Pediatrics and the National Association of School Nurses, to name a few, do not support a “no nit” policy in schools. A “no nit” policy would mean that students who have lice eggs whether or not live lice are present. While DSHS does not recommend a no nit policy, we do recognize that school districts may adopt one as a local option. DSHS does not have authority to impose a set policy regarding head lice on districts. DSHS does, however, urge school districts to ensure that its policy does not cause children to miss class unnecessarily or encourage the embarrassment and isolation of students who suffer from repeated head lice infestations.

Head lice infestation is a social issue not a health threat. No nit policies place a disproportionate amount of emphasis on head lice management than on real health concerns which should be a higher priority. This over-emphasis can lead to unproductive use of time by school staff and parents, missed classes, unnecessary absences, and parents missing work.
