THCIC audits have been corrected with the FER reported 100% accuracy. There may be duplicates or missing claims. An issue with payer mapping is being researched. Due to the difficulty in rerunning informational claims in Epic without negatively impacting operations, any attempt to rerun claims will cause significantly decreased volume and will not be an accurate accounting of our volume.

Our data is 99.2% accurate.

There are 7 uncorrected errors out of the 887 claims:

*5-invalid claim filing indicator code for other subscriber

*1-invalid SSN

*1-missing claim filing indicator code for Subscriber

The errors were not corrected due to IT infrastructure issues in Nov-Jan (vendor change). Access to the firewalls were compromised which resulted in connectivity issues within the EMR and financial data. Thankfully we are a paper medical record system, or it could have been worse.
