

Some of the items that have changed in V15-WebPlus are as follows:

- **COMPATIBILITY MODE**

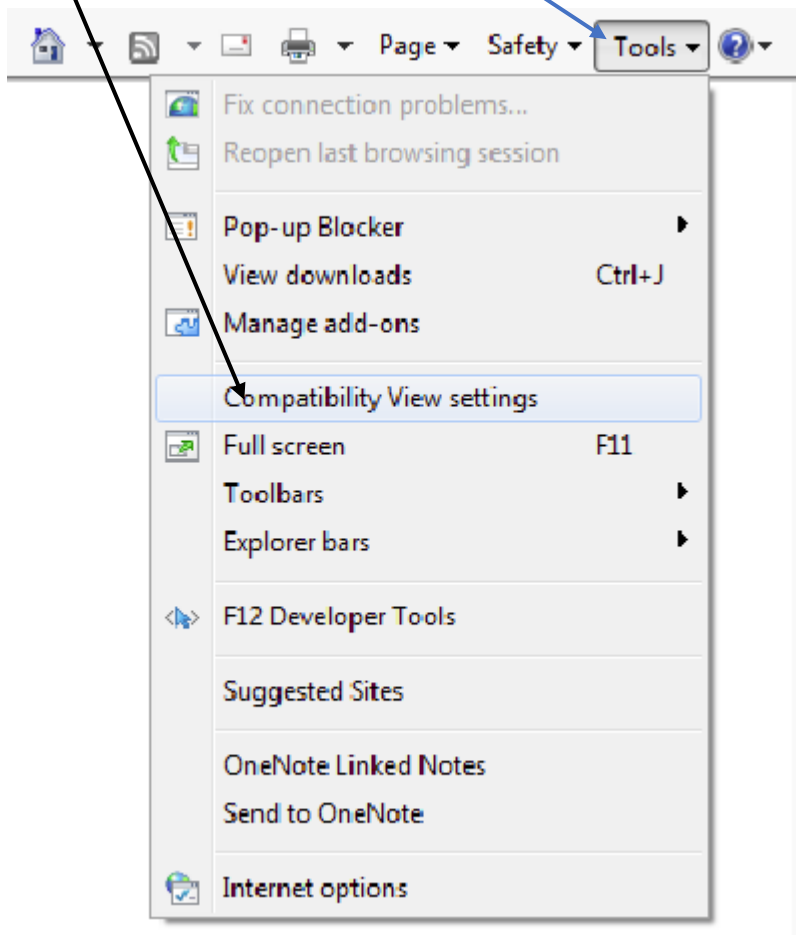

You must be working in compatibility mode for the application to function properly (drop down menus, auto-populated SSF, etc...)

There are two methods for selecting to work in compatibility mode:

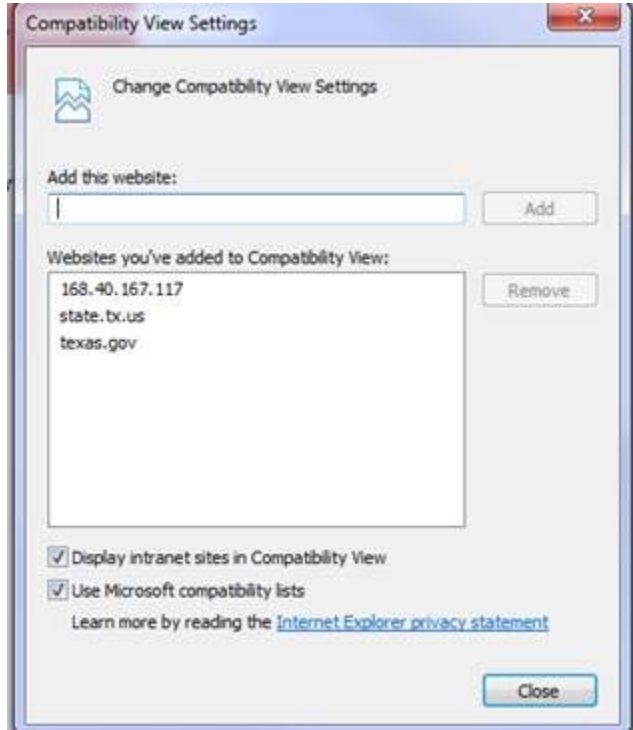

**Method 1.** - Click on the "Compatibility Mode" icon on the browser before you log in to WebPlus.

**Method 2.** - If your browser doesn't look like the screen shot above, then you will need to select "Compatibility View Settings" from the "Tools" drop down menu on your browser.

The following window will open and you will see the state.tx.us on the “Add this website” section. Click on “Add” to add this website to Compatibility view. Then click “Close”.

- NEW TWO-STEP PROCESS OF SAVING AND COMPLETING CASES

WebPlus now has a two-step process of saving and completing a case.

**Step 1. - Reporter must click on “Save” periodically (approx. every 20 minutes) during abstracting to prevent losing data.**

**Step 2. - Once the case is complete, click on the “Run Edits” box, and fix the edit errors. This process must be repeated until all edits are resolved in order to release the case.**
